

Crack and Crevice Pest Control

By DoMyOwn staff

OVERVIEW

Crack and Crevice Pest Control

Crack and Crevice pest control refers to the method of puffing small amounts of insecticide chemical dust by way of a hand duster directly into cracks and crevices that serve as harborages and highways for crawling pests. Insects will not detect the dust, but pick up small particles as they move along tight spaces and eventually ingest those fatal particles by absorption or ingestion when they clean themselves.

Target Pests

Crack and Crevice Pest Control is most effective against crawling pests that hide away underneath baseboards, inside walls, and other tight spaces. These pests include **cockroaches, ants, earwigs, silverfish, firebrats, centipedes, millipedes, and spiders.**

Most Popular Dusts for Crack and Crevice Pest Control

- [Delta Dust Insecticide](#) - Delta Dust is the only waterproof dust available, great for wall voids and cracks and crevices.
- [Drione Dust](#) - Pyrethrin dust provides quick control of many common pests for up to 6 months.
- [BorActin Insecticide Powder](#) - A versatile dust that offers proven control of crawling insects in commercial and residential locations.
