Indian Meal Moth Traps

By DoMyOwn staff

Inspection

Before selecting a trap for Indian Meal Moth removal, it is a good idea to perform a thorough inspection of the premises to identify where the moths are most active. Click here to find out how to perform this inspection.

Indian Meal Moth Traps

Pheromone Traps represent a simple and effective solution for getting rid of Indian Meal Moths and other product pests in kitchens, pantries, bathrooms, warehouses, and food processing plants.

How Indian Meal Moth Traps Work

Indian Meal Moth Traps and pantry pest traps are generally constructed of cardboard or paper lined on the inside with pheromone impregnated glue strip. Insect sex pheromones powerfully attract the male moths, trapping and killing them. Thus, mating is disrupted to the point of eventual control.

We recommend ProPest Pheronet Pantry Pest Trap or Revenge Pantry Pest Traps

Trap Set-Up

Both of the above traps are very simple to use. Simply remove the release paper on the trap to expose the glue. Form the trap into a box form and hang it in areas of moth activity. The trap can be hung with a hook or hanger or secured to a wall or other surface with double-sided tape. Each trap has an active life of 4 to 6 weeks.

Use Traps with a Crack & Crevice Sprays for Indian Meal Moth control

CB-80 Extra Aerosol - 17 oz. can

Microcare Aerosol - 20 oz. can

565 PLUS XLO spray can

Or save money with the Pantry Pest Kit:
