

Flea Identification Guide

Learn What Fleas Look Like

By DoMyOwn staff

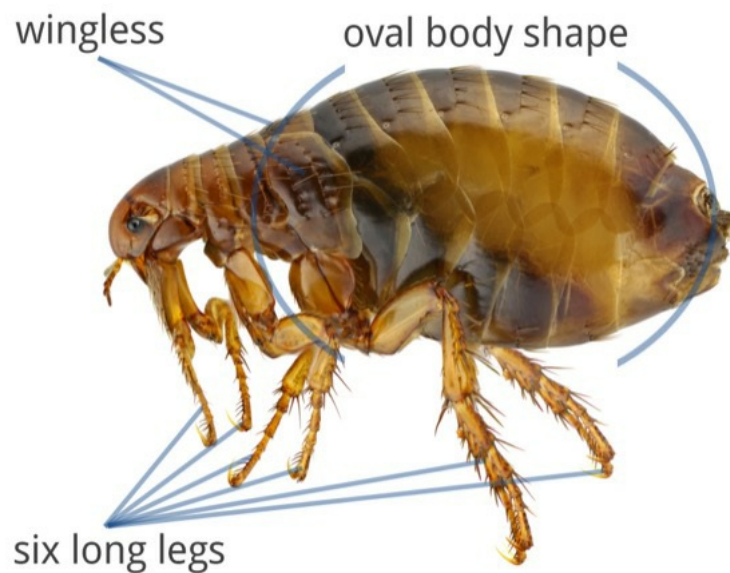

SIZE

While we have several species of fleas in the US, the cat flea has proven the most problematic as it is known to infest most domesticated animals and they are able to reproduce indoors.

Adult fleas are typically 1.5 mm to 3.5 mm depending on the gender.

SHAPE

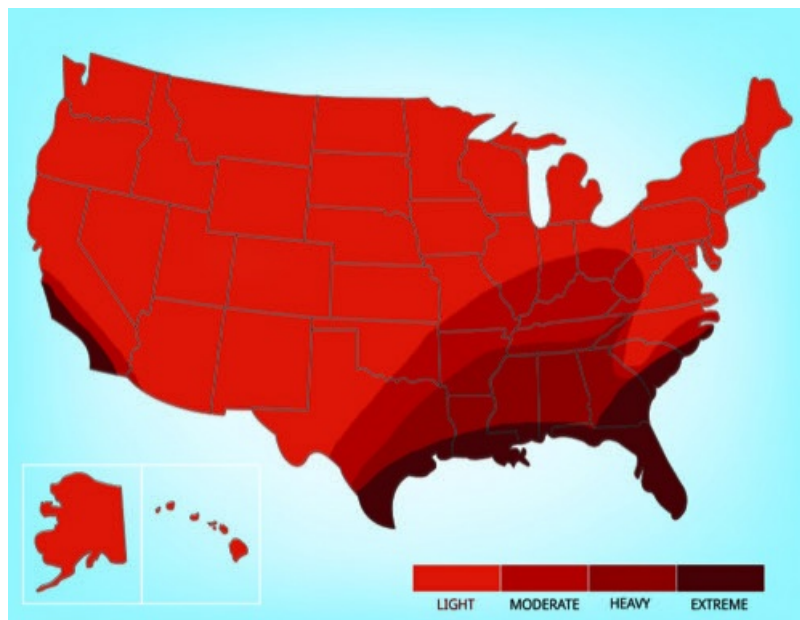

- Fleas have a laterally (side to side) compressed, oval body shape
- Fleas have 6 long legs
- Fleas do not have wings

COLOR

Adult fleas are a dark brown or dark reddish brown color. Immature stages of fleas including larva, pupa and eggs are rarely seen with the naked eye.

RANGE

Fleas can be found in every state around the US which is why there is such a great need for [flea control](#).
