How to Keep Flies Away

Fly Prevention Guide

By DoMyOwn staff

STEP 1 Create Unfavorable Conditions For Flies

House flies will likely always visit certain properties because the conditions are favorable for them to survive. By following our Integrated Pest Management Guide you will be able to prevent most house flies from gaining entry to your home or business and reduce the population to manageable levels.

In areas where house flies have been a major issue in the past you should consider using fly traps to keep the population under control.
