For Indoor, Outdoor and Turf Uses
Mold and Moisture Resistant
Ready-to-Use Bait

Active Ingredient: Orthoboric Acid ....10%
Other Ingredients:.................................90%
Total:.................................................100%

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Use Restrictions
In food areas of restaurants, residential, health care, educational, daycare, agricultural buildings, animal rearing and handling establishments, food handling and food processing establishments, this product may only be applied as a crack and crevice treatment. Any product remaining outside of cracks and crevices must be cleaned up and removed.

Application Directions
Use Sites: In and around residential, multi-family, commercial, industrial, municipal, institutional, research, recreational, health care, educational, daycare, hospitality and agricultural buildings and other man-made structures, garages, home greenhouses, transport vehicles, sewers, animal rearing and handling establishments and food handling and food processing establishments. Turf sites include lawns, landscape beds, ornamental turf, parks, playing fields, right-of-ways, golf courses and home greenhouses.

Outdoor Application: Apply bait evenly over the affected area using a hand shaker or mechanical spreader at a rate of 1 lb per 1000 square feet or 45 lbs per acre. The product should not be watered in. For mole cricket treatments, results will be best if the area is irrigated prior to bait treatment. Mole crickets typically come to the surface to feed in the evening. Individual ant mounds may be treated by sprinkling 1/2 oz of product around each mound. Repeat treatment as needed. Apply bait early in the season in areas likely to be infested, such as flower, fruit and vegetable fields, ornamental turf, parks, playing fields, right-of-ways, golf courses and home greenhouses.

Indoor Application: Apply bait only in areas inaccessible to children and pets, or in tamper-resistant bait stations. Apply bait at a rate of 3 oz (2/3 cup) per 100 square feet. Using a hand shaker or duster, apply bait in attics, crawl spaces, trash closets, utility closets, dropped ceilings, on dirt or gravel cellar floors, under and behind appliances and vending machines, in wall voids and voids under and behind cabinets, sinks and tubs, in drawer wells, garbage chutes, pipe chases, elevator pits, around drains, around electrical conduits and in cracks and crevices where insects may harbor. Focus application in areas where insects or their signs are seen. Reapply bait after one week if infestation is still present. A power duster may be used to apply bait in appropriate areas, such as attics and crawlspaces. The duster manufacturer's recommendations for settings should be followed.

Especially in attics, be sure to get bait near the eaves and vent pipes where insects often first enter, as well as around any pipes or potential access points between the attic and the main structure. Attics should have proper ventilation to insure that no food odor from the bait seeps into the living area, particularly in hot weather. If in doubt, apply the product in a manner such that it can be easily removed.

1. When treating cabinetry areas, if there is no gap between the lower cabinets and the kickplate, small holes can be drilled to access the voids. Escutcheon plates around pipes can be also be pulled back to allow access to voids.
2. The bottom drawers in kitchen and bathroom cabinets can be removed and bait dusted into drawer wells. No bait should be left exposed when drawers are replaced.
3. Electrical switch plate covers can be removed to allow access to voids, but bait shouldn't be applied directly in electrical boxes.
4. To help prevent insect problems from developing in homes and similar structures, a preventative program is recommended. Once per year, apply bait in attics and crawlspace at a rate of 8 oz per 1000 square feet.

Food Processing and Handling Establishment Application, including Federally-Inspected Meat and Poultry Plants: Follow instructions for other sites as appropriate. In food areas, only apply bait in cracks, crevices, and other inaccessible areas. Avoid contamination of food and feedstuffs. Never apply bait directly to a surface where food is stored, prepared or served. Any bait that is left visible after treatment should be swept into cracks and crevices or removed.

Storage and Disposal
Do not contaminate water, feed or soil by storage or disposal.

Disposal: Non-refillable container. Do not reuse or refill this container. Place in trash or offer for recycling if available. Call your local solid waste agency or 1-800-CLEANUP. If partly filled: Call your local solid waste agency or 1-800-CLEANUP. If empty: Non-refillable container. Do not reuse or refill this container. Place in trash or offer for recycling if available. If partly filled: Call your local solid waste agency or 1-800-CLEANUP which is managed as a public-private partnership.
