

QUALI-PRO

2-D

Post-Emergent Herbicide

Dual-powered post-emergent herbicide for tough broadleaf weed problems in established cool and warm season non-residential turfgrass. A single application delivers eight to twelve weeks of truly reliable control of dandelion, oxalis, clover and other difficult to control weeds.

Other Takeaways

- Dynamic combination of triclopyr and clopyralid provides to the root control of 35 broadleaf weed species
- A single application provides long-lasting, broad-spectrum control that helps eliminate repeat treatments
- Labeled for use on a wide variety of cool and warm season turfgrass with a low-odor formulation that's excellent for commercial and public applications

Formulation	A non-phenoxy post-emergent liquid
Active Ingredients	33% Triclopyr and 12.1% Clopyralid
Competitive Brand	Dow AgroSciences Confront®
Use Sites	Turf (see label for restrictions), Golf Courses (Fairways only), Non-Crop Areas
Effective Against	Chickweed, Clover, Dandelion, Narrowleaf Plantain, Oxalis, Smartweed, Wild Violet
Packaging	4 x 1 gallon bottles
Application Rates	See label for specific uses and rates
Mode of Action	Post-emergence selective systemic broadleaf herbicide which controls target weeds by mimicking the plant hormone auxin causing uncontrolled plant growth.
Signal Word	Danger
