

READY-TO-USE ADVION ANT GEL STATION

Advion® Ant gel station is a ready-to-use delivery system that contains the industry-leading Advion Ant gel bait, a powerful tool for broad-spectrum ant control.

- Self-contained, no-mess bait station for easy placement and disposal
- The highly attractive gel bait matrix results in greater consumption for effective colony control
- The MetaActive™ effect of the gel bait helps provide targeted, thorough control
- Targets all major ant species

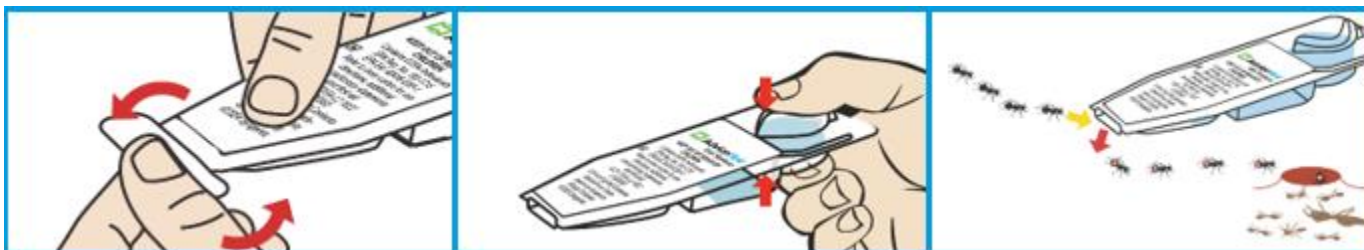

Revolutionary mode of action

The gel bait in Advion Ant gel station features the **MetaActive™ effect** found in all Advion brand products. It interacts with target insects' digestive enzymes to activate the active ingredient *indoxacarb* once ingested, leaving non-target organisms largely unaffected. *Indoxacarb* delays mortality and encourages feeding activity among worker ants, who then carry the bait back to the colony. The bait is quickly passed to other ants within the nest via horizontal transfer, including the queen and larvae, for complete colony control.

How to use Advion Ant gel station

The press-and-go Advion Ant gel station can be used indoors and outdoors around structures. This easy-to-use station is instantly activated by snapping off the top tab and squeezing the gel capsule. The gel bait remains contained within the station, where ants will readily feed. This helps the gel stay moist and attractive to feeding ants. When ant activity ceases, the station can simply be picked up and disposed of – with no mess to clean up and no bait left onsite.

1. Snap off the tab on the top of the station.

2. Squeeze the gel capsule to deposit the gel in the central compartment.

3. Place the station(s) in areas of ant infestation/activity.

When following label instructions, Advion Ant gel station can help eliminate ants within days of application. Full use instructions are provided as part of the product packaging and must be followed.
