- Easy to Use Fogger
- Non-Pesticide Cleaner

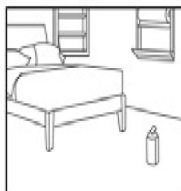

Mold Toxin Suppression

Mold problems come with a variety of health challenges connected to Mycotoxins. When a mold spore germinates it leaves behind inanimate organic fragments as microscopic fine and ultra-fine particulates. These fragments can carry nonliving toxins called Mycotoxins. They can become easily airborne, travel throughout an environment, and get into places a traditional product cannot reach, making them difficult to clean. Our revolutionary application process is designed to suppress mycotoxin carrying fine and ultra-fine particulate debris from the air using particulate suppression. This process grounds the particulates, making clean up quick and effective. Our product works great as a pre-or-post-treatment in conjunction with an antimicrobial cleaner. For use in residential and commercial environments. Go with a product that works!

Directions:

Set the Particulate Fogger in the center of the room.

Click the tab on top of the can. Point valve opening away from face and eyes when releasing.

Leave the environment for 2 hours to ensure proper saturation.

For best possible results, use in conjunction with Biocide 100 and Air Scrubber HEPA filtration system.

Storage:

Store in cool, dry place 40°F - 20°F.

Coverage:

Each can covers 100 - 150 square feet

Ingredients:

First Aid:

Should you come into physical contact, flush with water. If spray gets in mouth, rinse with water. If stomach discomfort occurs, seek medical attention.

KEEP OUT OF REACH OF CHILDREN

Do not release near an open flame.

CAUTION Contents Under Pressure
Net Weight 8 - oz. (113g)
