

Bat-A-Way

Granular Repellent

For Bats, Birds, Squirrels & Rabbits

Bat-A-Way Granular Repellent is an easy to use and humane repellent used to get bats, birds and squirrels out of attics, wall voids and other sheltered areas. It is also effective in keeping rabbits out of ornamental gardens.

For Bat, Bird & Squirrel Control:

In well ventilated areas, lightly sprinkle Bat-A-Way over the area at a rate of 1 pound per 400 square feet. For areas that are not well ventilated, put 2 to 4 ounces of repellent into mesh bags (cheesecloth, pantyhose, etc) or a small plastic container with holes punched in the top. This allows for easy product removal if odor becomes too strong. Bats, birds and squirrels will depart from the area within a short time.

After the nuisance pests leave, seal up all openings and cracks that they could use to get back inside. Use Nixalite's CopperBlocker copper mesh access control to seal off small gaps, cracks and openings. For ventilation openings, use a metal screening with a small mesh size (3/8" max).

For Outdoor Rabbit Control:

At the first signs of growth of roses, spring bulbs, flowers or other ornamentals, apply a 2 or more inch-wide band around the area to be protected. Do not apply Bat-A-Way on the plant or on the plant stems. One application can last up to 4 weeks. Hot weather and strong winds may require additional applications.

Note: ALWAYS read product label before application!!
