HOW TO APPLY

Apply the bait in many locations. Avoid cool or windy locations because house flies prefer warm, motionless sites for resting. Time applications to begin at the start of the season before house fly populations have reached their peak.

- **Scatter Application:** Scatter the bait directly from the container onto dry level surfaces so that the individual granules lie near each other without forming small piles.
- **Bait Station Application:** Place in any fly bait station. Use 1 bait station to cover approximately 250 sq. ft., and add up to 1.5 oz of bait per station. Secure bait stations at least 4 feet above the ground.
- **Paint-on Application:** Mix 1.5 oz. bait with 1 fl oz warm water (3 lbs in 1 quart water) and stir thoroughly. Let stand for about 15 minutes until a paste consistency suitable for painting has formed. Apply the paste with a brush to surfaces where house flies rest, avoiding surfaces that are dusty.
