

N-Boron®

Advanced Foliar Nutrition

N-BORON is a proprietary foliar supplement that provides highly mobile and available boron to plant growing points. It is an excellent tool for preventing and correcting boron deficiencies, and enhancing overall plant health.

Applying N-BORON during the growing season helps ensure that adequate levels of boron are present. It also helps prevent boron related deficiencies such as Black Heart, Hollow Heart, Hollow Stem, Crack Stem, Internal Cork and Small Fruit.

N-BORON® Advantages

- More efficient than other forms of B
- Low molecular weight and particle form allows more B to penetrate plant leaves and translocate to growing points
- Proprietary formulation coats leaves and adheres to the leaf surface, making it available to the plant longer
- Ready-to-use liquid formulation can be tank mixed with most fungicides, insecticides and PGR's
- Boron is essential to flowering and fruiting; cell division and structure; and shelf life. It also promotes pod fill and helps prevent pod abortion in soybeans.

The molecular shape and structure of MANNI-PLEX® foliar nutrients allows the plant to absorb more nutrients at a faster rate.

Guaranteed Analysis

5-0-0

Total Nitrogen (N)	5.0%
5.0% Urea nitrogen	
Boron (B)	3.3%
3.3% Water soluble boron	

Derived from urea and boric acid.

Application and Use

Field, Row, Vegetable, Fruit, Tree and Vine Crops: Apply 1-4 pints per acre per application throughout the growing season. At least 2 applications are recommended. More frequent applications at 1.5 quarts per acre may be needed to correct deficiencies once they occur.

Ornamental Crops: Apply 1-4 pints per 100 gallons water. Cover foliage thoroughly to point of runoff.

Optimum rate of application will vary depending on soil properties (such as pH, organic matter content, texture); weather conditions, time of year, general crop health and crop species. For best results, follow soil test or plant analysis recommendation.
