

Contains chlorothalonil, the active ingredient used in Daconil Weather Stik®.

FUNGICIDE

PROVEN CONTACT FUNGICIDE FOR EXCELLENT STICKING POWER

Dornic™ 720 F is a contact fungicide that extends the life of turf and ornamentals by delaying or preventing disease. The active ingredient chlorothalonil is known for its broad-spectrum activity, making it an ideal partner in fungicide resistance management programs. Designed to improve coverage, the built-in surfactant binds strongly to the plant surface, keeping the fungicide where it needs to be even after rain or irrigation. Dornic 720 F provides control of key diseases such as dollar spot, brown patch, powdery mildew and rusts.

KEY BENEFITS

- Excellent resistance management tool for a complete fungicide program
- Multi-site mode of action provides wide-spectrum disease control
- If the application is delayed by rain or wind, the spray solution can stay in suspension for up to six hours
- Built-in surfactant assures rainfastness in 30 minutes

KEY USES

- Commercial Lawns & Landscapes
- Golf Courses
- Greenhouses
- Ornamentals
- Parks & Recreation Areas
- Sod
- Turf

PRODUCT NOTES

EPA REGISTRATION NUMBER
91234-112

ACTIVE INGREDIENT
Chlorothalonil 54.0%

FORMULATION
Suspension Concentrate

FRAC NUMBER
M5

SIGNAL WORD
Caution

PACKAGE SIZE
2 X 2.5 gal

RESTRICTED USE
No

Refer to label for specific use restrictions.

Relevant. Simple. Reliable.

APPLICATION INFORMATION

TURF

Do not mow or water after treatment until spray deposited on turfgrass is thoroughly dry; Dornic 720 F should always be used in conjunction with good turf management practices. Begin applications when conditions favor disease development and repeat applications as long as these conditions persist. Under severe disease conditions, use the highest rate and shortest interval corresponding with the application schedule selected from the table in the product label.

For golf course fairways and roughs, lawns around commercial and industrial buildings, and professional and collegiate athletic fields, apply Dornic 720 F in an adequate amount of water to provide complete coverage. This amount may vary from 30 to 450 gallons per acre.

For golf course tees and greens, apply Dornic 720 F F in an adequate amount of water to provide complete coverage. This amount may vary from 90 to 450 gallons per acre. For sod farms, apply Dornic 720 F in 30 to 450 gallons of water per acre.

ORNAMENTAL PLANTS

Dornic 720 F should be applied to plants when both foliage and flowers are dry, or nearly dry. Apply in a spray to run-off when conditions are favorable for disease development. Repeat applications at 7 to 14-day intervals until conditions are no longer favorable. During periods when conditions favor severe disease incidence, generally cloudy or wet weather, apply Dornic 720 F at 7-day intervals. The minimum retreatment interval is 7 days.

KEY DISEASES

Algae
Anthracnose
Basal rot
Botrytis seedling blight
Brown blight
Brown patch
Bulb rot
Cherry leaf spot
Copper spot
Coryneum blight
Cyclaneusma needlecasts
Cylindrocladium stem canker
Dichondra leaf spot
Dollar spot
Fusarium
Gray leaf spot
Gray snow mold
Interior needle blight
Leaf curl
Leaf spot
Lophodermium needlecasts
Melting-out
Neck rot
Peach scab
Phoma twig blight
Phytophthora leaf blight
Powdery mildew
Red thread
Rhabdocline needlecast
Rhizosphaera needlecast
Scab
Scirrhia brown spot
Scleroderris canker
Sirococcus tip blight
Stem rust
Swiss needlecast
Taphrina blister
Weir's cushion rust
