## Dutch™ Bulb Food

HI-YIELD® DUTCH™ BULB FOOD is especially formulated to help bulbs flourish like they do in the fertile soils of Holland. HI-YIELD® DUTCH™ BULB FOOD provides primary nutrients necessary for root development and to grow big, beautiful flowers.

### DIRECTIONS FOR USE

#### NEW PLANTING

1. Dig a hole little deeper than is recommended for the type of bulb being planted. (See the chart on the side of this bag for planting depth recommendations.)

2. Next, mix the HI-YIELD® DUTCH™ BULB FOOD with the soil just removed from the hole at the rate of 1 rounded teaspoonful per square of bed area being planted, or ¼ cup per 10 square feet of bed area. Refill the hole with just enough of the soil and HI-YIELD® DUTCH™ BULB FOOD mix to obtain the desired planting level. This will allow the bulbs to start root growth into a more nutrient rich base.

3. Place the bulbs and cover with the remaining soil and HI-YIELD® DUTCH™ BULB FOOD mix. Water well after application and frequently again during dry weather.

#### ESTABLISHED PLANTS IN BEDS

Apply HI-YIELD® DUTCH™ BULB FOOD evenly over the bed area at a rate of 1 rounded teaspoonful per square foot of bed area at the rate of ¼ cup per 10 square feet of bed area, or 4 cups per 50 square feet. Water in well after application.

NOTE: This product is not recommended for, nor intended for use in container grown plants.

Perfect for use with Tulips, Gladiolus, Iris, Peonies, Crocus, Hyacinths, Cannas, Daffodils, Lillies, Scilla, Ranunculus, Begonias, Oxalis, Gloxinia, Calla (Yellow, Pink Or White), Caladium, Ligridia, Amaryllis, Anemone, Dahlia, and Jonquils. For best results, always select top quality bulbs. As a general rule, plant bulbs their diameter apart and twice the bulb's height deep. Consult the chart below for planting depth recommendations.
