ESSENTRIA[®] CONTACT SPRAY USES ESSENTIAL OILS TO KILL AND REPEL TARGET PESTS

At Zoëcon, our team of pest control experts prides itself on helping you find **environmentally conscious** products that deliver results. **Essentria[®] Contact Spray** is a botanical solution to combat a wide variety of pests. Utilizing geraniol and rosemary oil, Essentria[®] Contact Spray provides effective control that you can not only **trust to get the job done**, but also feel good about using.

Visit Zoecon.com to see how you can achieve **environmentally conscious pest control** with **Essentria[®] Contact Spray**.

Essentria® Contact Spray

TREATMENT OPTIONS

- Contact spray treatment for use on a wide variety of insects

ACTIVE INGREDIENTS

- Geraniol, 3.00%
- Rosemary Oil, 0.75%

ABOUT THE ACTIVE INGREDIENTS

Identifying naturally derived ingredients that have synergistic versus antagonistic properties is the key behind successful botanical based insecticides. Further supporting this key essential oil blend are the inert ingredients that preserve and protect the ingredients until application.

Geraniol is naturally derived from geranium, rose, and lemon plants.

Rosemary is grown commercially. When combined, both ingredients provide effective control against crawling and flying insects.

FEATURES

- Essential oil formulation
- Indoor and outdoor control
- Formulated for use on a variety of surfaces and locations
- Water-based formulation

BENEFITS

- Provides immediate kill
- Approved for indoor and outdoor applications
