

Equi-Stop

CLEAR

SAFELY STOPS HORSES FROM CHEWING WOOD

Directions for Use: Equi-Stop is easy to use and apply. Cut the tip off and place the cartridge in a caulking gun. Squeeze a bead on the area where horses are chewing or may chew in the future. Leave as a bead or spread it around. Equi-Stop is grease and will soak into bare wood and last a year or more. One taste and the horses will no longer chew the wood where it has been applied. If the wood is painted Equi-Stop will stay on the surface for a long time so use caution to keep people away. The product will not harm them but may give them skin irritation if they come in contact with the product. Equi-Stop is not water-soluble but will wash off with soap and water.

Application Cautions: Wear gloves when using Equi-Stop. The mineral oil used in Equi-Stop is similar to what the Vet will use to treat a horse with colic. The Chili's are very hot and will cause mild reddening of the skin and a burning sensation. Wash off immediately with soap and water or baby wipes. Use caution when applying Equi-Stop to areas where people may inadvertently come in contact with the product such as fencing where people may climb over or pass through. **Keep out of reach of children.**

Other Uses: Equi-Stop will keep animals from chewing bandages, steel gates and panels, trailers and tail biting. If using Equi-Stop on these surfaces it is recommended the product be removed once the behavior has stopped. If using on bandages do not let Equi-Stop penetrate to touch the wound or hairless areas as it will cause irritation. A small amount on a bandage will suffice.

Wear gloves when applying. May cause skin irritation. **KEEP OUT OF REACH OF CHILDREN.**

10 FL. OZ. (283 g)

"I have applied this product to wood fencing on my farm. It immediately stopped all fence chewing. Actually our horses were still not chewing on the fence months later. In my equine vet practice I have applied it to the outside of bandages a couple of times now on "bandage chews." Same result....flat stopped them immediately. This is even more impressive since I have tried grocery store hot sauce products in the past with no effect at all."
