

EverGreen® 60-6

Broad-spectrum botanical insecticide for immediate control on growing and stored crops

MGK's EverGreen 60-6 is a pyrethrin-based botanical insecticide synergized with PBO to maximize control, coverage and efficacy across a wide range of insects and crops. It controls over 100 different insects on most growing crops throughout the entire season including right up until harvest. EverGreen 60-6 is an ideal pre-harvest clean-up spray since it provides fast knockdown and kill with minimal field re-entry time. In addition to growing crops, EverGreen 60-6 can be used on ornamentals, stored products, livestock and even harvested fruits and vegetables.

MGK's Crop Protection Botanical Series Solutions

MGK's Crop Protection Botanical Series is the right choice for growers who are concerned about the environment and their field workers, but also want a more effective range of botanical insecticide options for the control of hard-to-kill insects. MGK products are formulated using softer, botanically-derived active ingredients so they have a lower impact on the environment, but a higher impact on pests.

Ask for MGK products.

EverGreen 60-6 Features

- **Highly-effective botanical control on over 100 different insects**
- **Ideal clean-up spray--No pre-harvest and very short 12-hour re-entry interval**
- **Can be used on almost all crop types**
- **Synergized with PBO to maximize effectiveness and reduce cost-per-acre**
- **Mixes with other insecticides for even faster, more complete kill**

Evergreen® 60-6

Broad-spectrum botanical insecticide for immediate control on growing and stored crops

Product Specifications

- **Packaging** – Quarts (6 per case), Gallons (4 per case)
- **Food Handling** – For use in food and non-food areas
- **Active Ingredients** – Pyrethrins, PBO
- **Flammability** – Not classified as flammable or combustible by OSHA
- **Mode of Action** – Sodium channel modulator – disrupts insects' nervous system
- **Class of Chemistry** – Pyrethrins, insect synergists
- **Respirator Required** – Required for fogging in enclosed areas such as greenhouses
- **Mix or Dilute in** – Water only
- **Activity** – Flushes insects from hiding; contact kill

Insects Killed

EverGreen 60-6 is a broad-spectrum botanical insect control solution for use on a wide variety of growing crops, livestock and stored grain. EverGreen 60-6 is effective on more than 100 insects including:

- | | |
|---------------------------|------------------|
| • Ants | • Harlequin Bugs |
| • Aphids | • Horn Flies |
| • Armyworms | • Leafhoppers |
| • Blow Flies | • Loopers |
| • Codling Moth | • Lygus |
| • Colorado Potato Beetles | • Psyllids |
| • Cucumber Beetles | • Stable Flies |
| • Grasshoppers | • Thrips |

Tips for Best Performance

- **Buffer the pH of the EverGreen 60-6 spray solution to 5.5 – 7.0**
Application of the spray solution with a pH outside of this range may result in poor performance on target pests.
- **EverGreen 60-6 is a contact insecticide – good coverage is key**
The amount of water used as a carrier has to be sufficient to achieve good coverage and contact target insects.
- **Tank mix EverGreen 60-6 with other products**
EverGreen 60-6 adds quick knockdown and kill, broad-spectrum control and resistance management benefits to other crop protection products. EverGreen 60-6 may be combined with other insecticides and acaricides where resistance may be a problem and to provide a flushing of insects from hiding and into contact with other spray residues for quicker and more complete control.
- **Use as a pre-harvest or a clean-up spray**
EverGreen 60-6 can be used where other insecticides cannot be due to pre-harvest and re-entry interval restrictions.
- **Consider application in early morning, late evening or during the night**
Reduced UV exposure and lower temperatures will increase performance and reduce impact on pollinators.
- **For most situations, start at the “mid” application rate for EverGreen 60-6**
In general, using EverGreen 60-6 at the rate of 8 fluid ounces per acre provides excellent knockdown and kill of insects. Conditions under which increasing the rate used per acre are recommended are – (1) extremely high insect populations – or (2) when the insect population is dominated by late-stage immature or adults.
