

FUNGICIDE ACTIVATOR

SELECT™

ADJUVANT

Get The Most From Your Fungicide

PRINCIPAL FUNCTIONING AGENTS

Oxirane, 2-methyl-polymer with oxirane, propylene glycol and glycerin

% ACTIVE INGREDIENT
95%

FORMULATION
Concentrate

MODE OF ACTION
Spreader/Extender

EPA REGISTRATION
N/A; All ingredients are exempt from tolerance under 40 CFR 180

RESTRICTED USE
None

SIGNAL WORD
Caution

PACKAGING INFORMATION
12 x 1 pt.

APPLICATION AREAS
Golf turf
Athletic fields
Residential lawns
Commercial lawns

Fungicide Activator Select™ allows you to get the most from your fungicide. Dramatically enhance the efficacy of your systemic and contact fungicide applications by adding Fungicide Activator Select to the mix. Fungicide Activator Select improves product adhesion and coverage on the surface of the plant, while simultaneously increasing drying time. Increased coverage and drying time means the plant, will have more chances to absorb a higher level of active ingredients.

- Increase disease control of fungicide applications
- Reduces wash-off from rain or irrigation
- Emulsion activity disperses actives throughout spray
- Increased spreading ensures broader coverage of contact fungicides
- Slower drying time allows for increased systemic uptake
- Ideal for sensitive turf grasses such as greens or tee boxes

IMPORTANT:
ALWAYS READ AND FOLLOW
LABEL INSTRUCTIONS.

RECOMMENDED USE RATES

All Fungicides:
1 pint per 100 gallons
of spray mix

Application Information:

Contact fungicides protect plants only where the spray is deposited and only for as long as the fungicide remains on the surface of the protected plants. Similarly, systemic fungicides require time to be taken up into the plant before they evaporate or are washed off. Fungicide Activator Select helps prolong and enhance the active life of a spray solution by increasing the surface area covered, adhering the solution to a target, and lessening the environmental effects on a fungicide.

Daconil Ultrex 2.5 oz. /1000
Primo Maxx 0.125 fl. oz. /1000
Fungicide Activator Select

How to Use

- Add directly into the tank during the mix process
- Fill the tank to $\frac{3}{4}$ of the desired level with water and add actives, adjuvant and an anti-foaming agent like Defoamer Select™ as needed and turn on agitation. Finish filling tank with water to desired level and add Fungicide Activator Select at the recommended use rate.
- If the user does not have experience with tank mixtures including Fungicide Activator Select, run a small scale phytotoxicity test before application.
- For maximum efficacy, add after any wettable powders or other solid formulations have been thoroughly dispersed.
