

Havoc Attack blocks

NEW FORMULATION

When rodents strike, make sure you are there to ATTACK.

Key Features:

- Highly palatable, second generation anticoagulant specially formulated for use by livestock and poultry producers.
- Unique blend of emulsifying agents that allow for a better blend (which equals higher palatability) of ingredients.
- Single feed bait block containing 0.005% brodifacoum and may kill rodents in just a single feeding.
- All-weather bait block that shows great heat tolerance
- Use as a part of Neogen's current Rotational Baiting Strategy- during the months of June-September

Active Ingredient: Brodifacoum

- Acute anticoagulant, single-dose rodenticide containing the active ingredient Brodifacoum
- Food-grade ingredients provide an excellent base for superior palatability.
- All-weather rodenticide developed to withstand the challenging conditions of agricultural production environments.
- Designed to kill house mice, norway rats and roof rats in and around livestock buildings.

Product Function:

Bait blocks are designed to be put in bait stations or other locations (per label instructions) to be consumed by rodents, and thus control rat and mice populations. The formulation of food grade ingredients is such that this bait is highly attractive to rodents, and is readily consumed. The 0.005% inclusion rate of the brodifacoum active ingredient is sufficient to kill rodents in a single feeding.

Application Direction:

SELECTION OF TREATMENT AREAS: Determine areas where rats or house mice will most likely find and consume the bait. Generally, these areas are along walls, by gnawed openings, in or beside burrows, in corners and concealed places, between floors and walls, or in locations where rodents or their signs have been seen. Protect bait from rain or snow. Remove as much alternative food as possible.

NORWAY AND ROOF RATS: Apply 4 to 16 Havoc Attack Blocks per placement. Space placements at intervals of 15 to 30 feet in infested areas. Maintain an uninterrupted supply of fresh bait for at least 10 days or until there no longer are signs of new feeding by rats.

HOUSE MICE: Apply one Havoc Attack Blocks at each placement location. Space placements at 8- to 12-foot intervals. Larger placements (up to 2 ounces) may be needed at points of very high house mouse activity. Maintain an uninterrupted supply of fresh bait for at least 15 days or until there are no longer signs of new feeding by house mice.

FOLLOW-UP: Replace contaminated or spoiled bait immediately. Using waterproof gloves collect and dispose of all dead, exposed animals and leftover bait properly. To discourage reinfestation, limit sources of rodent food, water and harborage as much as possible. If reinfestation does occur, repeat treatment. Where a continuous source of infestation is present, establish permanent bait stations and replenish as needed.

Item#	Product Description
116393	Havoc Attack Blocks 10lb Bucket
116394	Havoc Attack Blocks 20lb Bucket
