| 3 TIMES DAILY | Dogs under 60lbs 10 drops |
| | Dogs over 60lbs 15 drops |

ONCE CONDITION HAS CLEARED STOP DOSING, IT CAN ALWAYS BE RESTARTED IF COMPLAINT RECURS

ADMINISTRATION: Optimally, the liquid preparation should be dropped directly on to the mucous membrane of the mouth, the including lips, by raising the head until the mouth opens. Where an animal finds this distressful or an owner is unable to comply, the medication can be put in the food, water or milk. Where a cat or pet is sensitive to the odor of the alcohol preservative, a 10-20 minute period should be allowed for it to dilute and evaporate before the liquid or food is presented to the patient. Occasionally, animals will shake their heads as a response to the alcohol preservative, or cats may salivate excessively--in these cases presenting it in food, water or milk works.

ADVERSE EFFECTS AND CONTRAINDICATIONS: None known other than reversible effect of overdosage. Overdosage will result in a return of symptoms after the symptoms have initially disappeared. Where a return of symptoms occur while on the medication, ceasing to use will alleviate the effect. Patients who are hypersensitive to homeopathic preparations will show response to a single dose, which may not need to be repeated for some time. For this reason therapy should always start with a single dose the previous day and should a major response be seen, therapy should not be recommenced until symptoms relapse and then only a single dose given for maximum effect. Although there is no evidence that there are any safety issues, extra care should always be taken when dealing with pregnant animals. Should a suspected adverse reaction be seen or advice needed, please contact HomeoPet, LLC (contact information at bottom of sheet).

DRUG INTERACTIONS: None known for animal use; keep out of reach of children.

PHARMACEUTICAL PRECAUTIONS: Store at room temperature, out of direct sunlight, and away from strong odors.

USER SAFETY: No adverse effects have been recorded. There have been reports to the company of beneficial rather than adverse effects. As homeopathics are active in humans care is advised when handling product, although a long history of homeopathics used in humans shows a very high safety margin.

ENVIRONMENTAL IMPACT: To date none found.
