Microencapsulated Lambda-cyhalothrin • Easy to Mix

LambdaStar™ 9.7% CS is a microencapsulated lambda-cyhalothrin in an easy to mix formulation which utilizes new EcoCap™ technology. EcoCaps use vegetable oil instead of petroleum products to provide long lasting residual with less harm to the environment. Never before has a pyrethroid spray been so effective while still going green. Eliminating petroleum allows the product to avoid California Prop 65 regulations. Independent lab tests demonstrate efficacy on a

wide range of pests. The product may be used indoors, including food areas, and outdoors including structural, turf and ornamental, and livestock housing sites. LambdaStar™ is the only product currently labeled for brown marmorated stink bugs and kudzu bugs.

Label and MSDS available at
www.rockwelllabs.com.

Product Code: LGLS016

16 oz squeeze-n-measure bottle, 12 per case
