## Lady Bug Attractant

### LADY BUG FACTS

Use lady bug lures throughout the season to keep beneficial insects in your garden. Lady bug lure pheromone acts as a natural magnet that tells beneficial insects where to find bugs to eat, such as aphids, plant lice, scale insects and other pests that attack gardens. Beneficial insects drawn to your garden by the Lady Bug Lure will search and destroy pests and then move on looking for more food. Look for dried up, dead aphids and check for reduced aphid numbers and damage. Effects may not be seen for as long as 3 weeks. The Lady Bugs and other beneficial insects may be difficult to find or identify since they will be hiding from their predators.

**EASY INSTRUCTIONS** (Do not touch the Lure, use gloves). Open the pouch, remove the lure. Open the top and attach twist tie to the Lure. Attach Lure to any plant in your garden or greenhouse where aphids and other insects are present. Lures will cover up to six feet in diameter. Replace lures every 2 to 3 weeks.

**DO NOT USE TOXIC PESTICIDES WITH LADYBUG ATTRACTANT**
