

MotherEarth™

Granular Scatter Bait

Whitmire Micro-Gen introduces an effective long-lasting granular scatter bait for ants, cockroaches, crickets and other occasional invaders.

MotherEarth Granular Scatter Bait is based on proven technology derived from the earth and offers long-lasting, broad-spectrum control for preventative and curative treatments. The active ingredient, boric acid, is mined directly from the earth and combined with a granular bait matrix consisting of a complex blend of attractants for superior acceptance. This matrix also protects the active ingredient so that it is there when needed.

Boric acid has a long history of use in the pest control industry. Since this active ingredient targets the insect's metabolism, pests can't develop resistance, making it particularly well suited for ants, cockroaches, crickets and silverfish and other occasional invaders.

Beneficial features for both you and your customers

- Attractive bait matrix for broad-spectrum control
- Granular bait for long lasting protection and easy application
- Active ingredient is mined directly from Mother Earth
- Odorless and non-staining
- Low mammalian toxicity
