

Luralite Cento Plus: New and Improved!

Luralite Evolution:

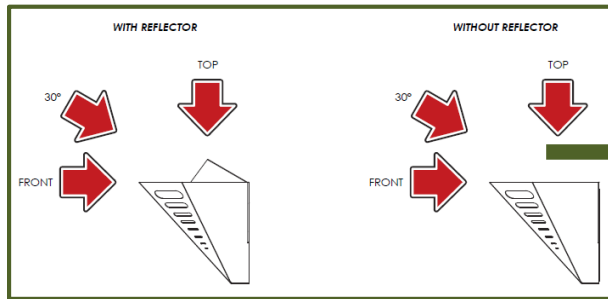

For over ten years, the Luralite™ Cento Plus has been one of the most effective easiest to service decorative flylights on the global pest control market. When first launched onto the North American market, Luralite™ Cento Plus incorporated a reflector to ensure we met our obligations with regard to existing market intellectual property, whilst also ensuring that the product remained highly effective and easy to service.

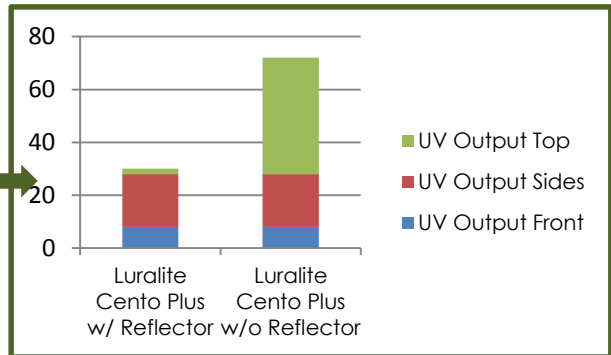

27 months ago we added the functionality of a safety cut out switch, to cut power to the product during servicing. This was in line with the current recommendations from a leading safety test house. We launched this revised model (Revision 2) under a new part number LL18W/110v.

Luralite New Features:

Having listened to the opinion our valued customer base, we have further developed the product to once again improve efficacy and make it even easier to service. The new and improved Luralite™ Cento Plus (Revision 3) now features a simplified design, without the safety cut out switch or the reflector. These changes in specification ensure that the glueboard and bulb can be easily changed within seconds, every time, and the removal of the reflector is proven to emit 44% more UV irradiance, maximising the attraction of flying insects.

UV Irradiance Testing Carried Out

Results: 44% more UV irradiance

The Most Effective and Serviceable Sconce in the World!!

- 44% more UV irradiance
- Quick to service
- Largest sconce glueboard in the market
- Higher customer satisfaction
