

NITROGEN PROTECTION REDEFINED

N-Fixx® Duro provides longer-lasting nitrogen protection to maximize your fertilizer investment.

PRODUCT HIGHLIGHTS

- Nitrogen stabilizer with NBPT plus duromide
- Helps protect against nitrogen loss by volatilization
- Consistent protection in soil types across a wide range of pH levels
- Increases nitrogen efficiency to improve yield potential
- Low use rates
- Flowtech Formulation Technology:
 - Improves absorption & coverage on urea
 - Improves flowability of treated urea
 - Improves mixing & stability with UAN
 - Improves active shelf life on urea
 - Improves handling in cold conditions
 - More uniform distribution

N-Fixx Duro controls nitrogen loss through ammonia volatilization with trusted NBPT and new, patented duromide. With dual active ingredients enhanced with **Flowtech® Formulation Technology**, it strengthens nitrogen protection and improves fertilizer applications.

Like NBPT, duromide is a urease inhibitor, but it breaks down at a slower rate. Combining these active ingredients makes N-Fixx Duro more resistant to soil degradation, which extends the window of nitrogen protection.

N-Fixx Duro controls nitrogen loss and increases efficiency in diverse growing conditions. With Flowtech Formulation Technology, it provides application benefits with both urea and UAN.

Redefine nitrogen protection this season with N-Fixx Duro. Contact your local Helena representative or authorized dealer for more information on N-Fixx Duro.

FORMULATED WITH

DUROMIDE

Patented urea & UAN stabilizer technology works with NBPT to protect nitrogen longer

Contributes to more efficient coating operations & helps reduce fertilizer buildup on equipment
