NEW AND IMPROVED SNAKE GUARD™

THE ORIGINAL SNAKE TRAP™

PLACE THIS SIDE DOWN

U.S. PAT. 5,497,576

The Snake Guard™ snake trap provides peace of mind and a sense of security by allowing you to safely capture and remove unwanted snakes from where you live, work, and play. The Snake Guard™ snake trap is the only product available that is both safe* and effective at removing snakes from your home, backhouse, workshop, warehouse or any other area that snakes may frequent.

The Snake Guard™ snake trap is quickly assembled in 3 easy steps. Please read the following instructions carefully before assembling.

INSTRUCTIONS FOR ASSEMBLY AND USAGE

1 After removing the Snake Guard™ snake trap from its packaging, unfold it and place it on a flat, clean and dry surface with the release paper strips facing up. Carefully peel back the release paper, exposing the specially formulated glue. (Caution: This glue is very sticky, avoid any contact, particularly with clothing and hair.)

2 Fold Snake Guard™ snake trap along the spiral folds so that it forms a box with the glue strips on the inside, being careful not to allow the inside top of the box to come into contact with the glue. Securely fasten TAB 1,2,3 into SLOT 1, 2, and 3.

3 Finally, using light pressure, push the trap into the hole. Push in the underside of the box. Push in the opposite of the thickness of the cardboard.

▶ Trap Placement for Best Results

For the Snake Guard™ snake trap to be the most effective, placement of the trap is important. Snakes move better when they are against an object such as a wall. This gives them traction. Place the Snake Guard™ snake trap in an area snakes are likely to frequent such as basements, garages, storage buildings, boat houses and other similar structures. Place trap on a flat surface and firmly against a wall or other firm vertical surface. For the Snake Guard™ snake trap to work properly it is important to place the side of the trap marked "PLACE THIS SIDE AGAINST WALL" firmly and evenly against the wall. Trap may be held in place against wall by use of short strips of adhesive tape, or an object such as a brick on the outside edge of the trap.

BE CAREFUL
WHEN RELEASING THE
SNAKE

CAUTION! Checking the Trap

Trapped snakes may be potentially harmful.

Check the Snake Guard™ snake trap frequently to minimize the possibility of children or pets discovering a trapped snake. Check the Snake Guard™ snake trap by shining a flashlight through the holes in the top of the trap.

CAUTION! Snake Release Use Extreme Caution

Snakes are an important part of the ecological balance, and we encourage their release. For your safety you may prefer to call a local exterminator, zoo, wildlife rescue center or other appropriate animal control agency to remove the trap. If you remove the trap yourself use extreme caution, as trapped snakes may still be harmful. Keep hands away from the open ends of the trap. Pick up the trap with two hands, one on each side and in the middle of the trap. Remove the trap to a remote area suitable for release of the snake.

Snakes may be formed by direct sunlight or extreme heat, and should be released as quickly possible. Release snakes in shaded area away from roadways. Carefully lift the Snake Guard™ snake trap, top exposing the snake inside the trap. Four liberal amounts of vegetable cooking oil on the snake and on the glue around the snake, then leave the immediate area. A snake will typically be able to free itself in less than an hour.

Thank you for your purchase of the Snake Guard™ snake trap.

Use Snake Guard™

Home • Basements • Garages • Storage Sheds • Workshops • Backhouses • Cellars • Stables • Dog Runs • Anywhere Snakes Product!
