PALMGAIN

FOR DEEP GREEN FOLIAGE

Label. Use in accordance with label cautions and directions.

Palms, ixora, and ornamental plants need ample amounts of nitrogen, potassium, phosphorus, sulfur, and other micronutrients to produce lush green growth and vibrant colors. The easy way to ensure plants have these meaningful elements. Feed every 4 to 6 weeks throughout the growing season. In areas where there is a threat of frost, feed every 4 to 6 weeks from February to September. Do not fertilize immediately when planting palm trees. Wait 2 to 4 weeks after planting when you're sure adequate soil water content is achieved and transplant shock has passed. See chart for feeding amounts. Spread the fertilizer evenly on the soil surface, within the drip line of the plant but away from the trunk. Scratch lightly on the soil surface to work the fertilizer into the soil. Be sure to avoid damage to shallow roots. Do not throw fertilizer down the crown of the plant. Do not apply PALMGAIN to dry soil. Be sure to water the area well before and after fertilizing. Take care to brush or wash fertilizer granules off leaves to prevent leaf injury. For plant beds, apply one full 10lb bag per 500 square feet. Water soluble fertilizers are good both for spraying leaves (foliar feeding) and for fertilizing plants, so supplement

Isis is the Egyptian goddess of fertility, the personification of beauty. The roots of our fertilizer company begin with her. Our fertilizers are used in landscapes across the world; bringing vibrant color, joy, and life to the weekend gardener and landscape architect.

Palms, In-Ground

2-3' tall	¾ cups
4-6' tall	1¼ cups
7-10' tall	1½ cups
11-15' tall	2¼ cups
16-20' tall	4 cups

Potted Plants

6" pot	1 cup
10" pot	3 cups
14" pot	1½ cups

Ornamental Plants, In-Ground

1 cup per 25' (5'x5')

CAUTIONS: We recommend that all fertilizers be kept out of reach of children and pets. This product may be harmful if swallowed and may cause skin and eye irritation. Avoid breathing dust. Do not use on lawns and water
