

Contains Azoxystrobin and Difenoconazole, the active ingredients used in Briskway®.

FUNGICIDE

EcoCore

**PROTÉGÉ™**

## HIGH TEMPERATURE PERFORMANCE FOR TURF PROTECTION

Protégé™ uses the fast-acting fungicidal power of azoxystrobin and difenoconazole to bring disease control and improved plant performance to golf course turf areas. The dual modes of action work together to give resistance management protection and broad-spectrum control in IPM programs. Protégé is an ideal tool for golf course turf areas, it can perform in high temperatures and in varied climates, targeting a broad spectrum of turf diseases such as dollar spot, anthracnose, and more.

### KEY BENEFITS

- No growth regulation effects or phytotoxicity
- Exceptional rainfastness and rapid uptake
- Dual modes of action give broad-spectrum control
- Preventative and curative protection
- No heat restrictions

### KEY USES

- Golf Course Turf

### PRODUCT NOTES

#### EPA REGISTRATION NUMBER

91234-143

#### ACTIVE INGREDIENT

Azoxystrobin 18.2%  
Difenoconazole 11.4%

#### FORMULATION

Suspension Concentrate

#### FRAC NUMBER

11, 3

#### SIGNAL WORD

Caution

#### PACKAGE SIZE

2 x 1 gal

#### RESTRICTED USE

No

Refer to label for specific use restrictions.

## APPLICATION INFORMATION

Thorough coverage is necessary to provide good disease control. Make no more spray solution than is needed for application. For control of foliar diseases, allow Protégé applications to completely dry prior to irrigating. For control of soil-borne diseases, Protégé can be watered in after application. When an adjuvant is to be used with this product, Atticus, LLC advises the use of a Chemical Producers and Distributors Association certified adjuvant.

Under certain conditions conducive to extended infection periods, use another registered fungicide for additional applications if the maximum amount of Protégé has been used. If resistant isolates to Group 3 or Group 11 fungicides are present, efficacy can be reduced for certain diseases. The higher rates in the rate range and/or shorter spray intervals may be required under conditions of heavy infection pressure with highly susceptible varieties, or when environmental conditions are conducive to disease.

Protégé is recommended for control of certain pathogens causing foliar, stem and root diseases including leaf and stem blights, leaf spots, patch diseases, mildews, anthracnose, fairy rings, molds, and rusts of turfgrass plants. Protégé should be integrated into an overall disease and pest management strategy whenever the use of a fungicide is required.

## KEY DISEASES

Anthracnose  
Brown Path and Large Patch/Zoysia Patch  
Leaf and Sheath Spot  
Brown Ring Patch  
Cool Weather Brown Patch, Yellow Patch  
Dollar Spot  
Fairy Ring  
Microdochium Patch  
Gray Leaf Spot  
Leaf Rust  
Stem Rust  
Stripe Rust  
Leaf Spot  
Melting Out  
Necrotic Ring Spot  
Pink Patch  
Powdery Mildew  
Red Thread  
Southern Blight  
Summer Patch  
Take-all Patch
