SECTION 1. CHEMICAL PRODUCT AND COMPANY INFORMATION

Product Name: Bayer Advanced Dual Action Rose & Flower Insect Killer Ready-To-Use
Chemical Name: Imidacloprid Technical
Common Name: Bayer Advanced Dual Action Rose & Flower Insect Killer Ready-To-Use
MSDS Number: 2228
Chemical Family: Insecticide
Chemical Formulation: Ready-To-Use
EPA Registration No: 72155-28
Product Use: Insecticide, for use on: Flowers, Roses, Shrubs

Bayer Environmental Science
95 Chestnut Ridge Road
Montvale, NJ 07645
USA

SECTION 3. HAZARDS IDENTIFICATION

NOTE: Please refer to Section 11 for detailed toxicological information.

Emergency Overview: Caution! Harmful by inhalation and if swallowed. Causes eye irritation. Avoid contact with skin, eyes and clothing. Avoid breathing spray mist. Wash thoroughly with soap and water after handling.

Physical State: Viscous Liquid

Appearance: Clear

Routes of Exposure: Ingestion, Inhalation, Skin contact

Immediate Effects
Eye: Avoid contact with the eyes. Causes eye irritation.
Material Safety Data Sheet

Bayer Advanced Dual Action Rose & Flower Insect Killer
Ready-To-Use

MSDS Number: 000000002228
MSDS Version 1.0

Page 2 of 7

Skin
No skin irritation

Ingestion
Harmful if swallowed. Do not take internally.

Inhalation
Harmful if inhaled. Avoid breathing spray mist.

SECTION 4. FIRST AID MEASURES

Eye
Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.

Skin
Remove contaminated clothing and shoes. Wash off immediately with plenty of water for at least 15 minutes. Call a poison control center or doctor for treatment advice.

Ingestion
Never give anything by mouth to an unconscious person. DO NOT induce vomiting unless directed to do so by a physician or poison control center. Have person sip a glass of water if able to swallow. Call a poison control center or doctor immediately for treatment advice.

Inhalation
Move to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth if possible. Call a poison control center or doctor for further treatment advice.

SECTION 5. FIRE FIGHTING MEASURES

Flash Point
> 93.3 °C / > 199.9 °F

Suitable Extinguishing Media
Water, Foam, Dry chemical

Fire Fighting Instructions
Keep out of smoke. Equipment or materials involved in pesticide fires may become contaminated. Cool closed containers exposed to fire with water spray. Do not allow run-off from fire fighting to enter drains or water courses.

Wear self-contained breathing apparatus and protective suit.

SECTION 6. ACCIDENTAL RELEASE MEASURES

General and Disposal
Keep unnecessary people away, isolate hazard area and deny entry. Avoid contact with spilled product or contaminated surfaces.

Land Spill or Leaks
Avoid breathing vapors and avoid skin contact. Use personal protective equipment. Dike contaminated area with absorbent granules, soil, sand, etc. Carefully sweep up absorbed spilled material. Place in covered container for reuse or disposal. Scrub contaminated area with soap and water. Rinse with water. Use dry absorbent material such as clay granules to absorb and collect wash solution for proper disposal. Contaminated soil may have to be removed and disposed. Do not allow material to enter streams, sewers, or other waterways or contact vegetation.
SECTION 7. HANDLING AND STORAGE

Handling Procedures  When using in animal quarters, do not apply directly to food, water or food supplements.

Storing Procedures  Keep tightly closed in a dry, cool and well-ventilated place. Store in original container and out of the reach of children, preferably in a locked storage area.

Do not freeze.

SECTION 8. EXPOSURE CONTROLS / PERSONAL PROTECTION

General Protection  There are no known hazards associated with this product when used according to the label directions. At the same time, the following guidelines should be used.

Avoid inhalation of vapour or mist.

Avoid contact with skin and eyes.

Wash hands thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet.

Do not allow children and pets to enter the treated area until it has dried.

Exposure Limits  None Established

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance  Clear

Physical State  Viscous Liquid

pH  7.7 - 8.2 at 25 °C

Specific Gravity  1.00

Bulk Density  8.331 lbs/gal

Viscosity  2 mPa.s

SECTION 10. STABILITY AND REACTIVITY

Chemical Stability  Stable under recommended storage conditions.

SECTION 11. TOXICOLOGICAL INFORMATION

Acute toxicity studies for this product have been bridged from another product containing a higher percentage of the active ingredients Beta-cyfluthrin (1.35%), an enriched isomer mixture of Cyfluthrin and Imidacloprid (10%). The non-acute information pertains to the active ingredients, Beta-cyrluthrin technical, Cyfluthrin
Acute Oral Toxicity | Male/Female Rat: LD50: > 2,000 mg/kg
---|---
Acute Dermal Toxicity | Male/Female Rat: LD50: > 4,000 mg/kg
Acute Inhalation Toxicity | Male/Female Rat: LC50: > 1.2 mg/l
| Exposure time: 4 h
| Determined in the form of liquid aerosol.
| (actual)
| Maximum attainable concentration.
| Male/Female Rat: LC50: > 4.8 mg/l
| Exposure time: 1 h
| Determined in the form of liquid aerosol.
| Extrapolated from the 4 hr LC50.
| (actual)

Skin Irritation | Rabbit: non-irritant
Eye Irritation | Rabbit: non-irritant
Sensitization | Guinea pig: non-sensitizing

Subchronic Toxicity | BETA-CYFLUTHRIN TECHNICAL
| In a subchronic dietary study, dogs treated with beta-cyfluthrin, exhibited vomiting, diarrhea, decreased body weight gain and clinical neurological symptoms at the highes dose level (360 ppm).

| In a subchronic dietary study in rats treated with beta-cyfluthrin, effects included reduced body weight gains and feed consumption, uncoordinated gait, and skin injuries of the neck and head from excessive preening due to the local irritant effect of the test material.

| In a 4-week inhalation study in rats exposed to beta-cyfluthrin, effects observed included ungroomed fur, piloerection, hyper- and hypoactivity, reduced body weight gains, hematological changes and reduced organ weights (thymus, spleen).

IMIDACLOPRID TECHNICAL
| In a 3-week dermal toxicity study, rabbits treated with imidacloprid showed no local or systemic effects at levels up to and including 1000 mg/kg, the limit dose.

| In a 4-week inhalation study, rats exposed to high concentrations of imidacloprid exhibited decreased body weight gains and changes in clinical chemistries and organ weights.

Chronic Toxicity | IMIDACLOPRID TECHNICAL
| In chronic dietary studies in rats and dogs exposed to imidacloprid, the target organs were the thyroids and/or liver.

Assessment Carcinogenicity | IMIDACLOPRID TECHNICAL
| In oncogenicity studies in rats and mice, imidacloprid was not considered carcinogenic in either species.
Reproductive & Developmental Toxicity

BETA-CYFLUTHRIN TECHNICAL
DEVELOPMENTAL TOXICITY: In an oral developmental toxicity study in rats treated with beta cyfluthrin, decreased fetal body weights and an increased incidence of skeletal findings were observed at the maternally toxic and lethal high dose level (40 mg/kg).

IMIDACLOPRID TECHNICAL
DEVELOPMENTAL TOXICITY: In developmental toxicity studies in rats and rabbits, there was no evidence of an embryotoxic or teratogenic potential for imidacloprid. In both species, developmental effects were observed only at high doses and in conjunction with maternal toxicity.

REPRODUCTION: In a two-generation reproduction study in rats, imidacloprid was not a primary reproductive toxicant. Offspring exhibited reduced body weights at the high dose and in conjunction with maternal toxicity.

Neurotoxicity

BETA-CYFLUTHRIN TECHNICAL
In acute and subchronic neurotoxicity screening studies in rats, beta-cyfluthrin produced slight transient neurobehavioral effects in each study at the highest dose tested. There were no correlating morphological changes in neural tissues in either study.

IMIDACLOPRID TECHNICAL
In acute and subchronic neurotoxicity screening studies in rats, imidacloprid produced slight neurobehavioral effects in each study at the highest dose tested. There were no correlating morphological changes observed in the neural tissues.

In a one-generation developmental neurotoxicity screening study in rats, offspring exposed to imidacloprid showed decreased body weights and motor activities. These effects occurred at the highest dose tested and in conjunction with maternal toxicity. There were no correlating morphological changes observed in the neural tissues.

Mutagenicity

BETA-CYFLUTHRIN TECHNICAL
Numerous in vitro and in vivo mutagenicity studies have been conducted on beta-cyfluthrin, all of which are negative.

IMIDACLOPRID TECHNICAL
The imidacloprid mutagenicity studies, taken collectively, demonstrate that the active ingredient is not genotoxic or mutagenic.
SECTION 12. ECOLOGICAL INFORMATION

Environmental Precautions

Apply this product only as specified on the label. Do not apply directly to water. This product is extremely toxic to fish and aquatic invertebrates. Do not apply this product while bees are actively visiting the treated area. This product is highly toxic to bees exposed to direct treatment.

SECTION 13. DISPOSAL CONSIDERATIONS

General Disposal Guidance

It is best to use all of the product in accordance with label directions. If it is necessary to dispose of unused product, please follow any applicable state or local guidelines. Never place unused product down any indoor or outdoor drain.

Container Disposal

Do not re-use empty containers. Triple rinse containers. Wrap and discard in trash.

RCRA Classification

Not Regulated under this Statute

SECTION 14. TRANSPORT INFORMATION

DOT CLASSIFICATION:
Not regulated for transportation

FREIGHT CLASSIFICATION:
Insecticide or Fungicides, N.O.I., other than poison
