

HOW TO USE ROSEGAIN: ROSEGAIN provides heightened growing power that lends to strong root development and large, vibrant blooms.

Zones 2-8
(cold climates)

Application Amount: 4 tablespoons per plant, sprinkled around the top of the soil

Application Time: Every 30 days between mid-February through mid-November.

Zones 9+
(warm climates)

Application Amount: 4 tablespoons per plant, sprinkled around the top of the soil

Application Time: Every 30 days, year round. Cease application if there is ever frost present.

When fertilizing, monitor the color and health of your plant and adjust the amount of fertilizer as needed. Be sure to keep granules about **3-4 inches away from the stem** of the rose and water-in thoroughly after each application. Take care to brush or wash fertilizer granules off leaves to prevent leaf injury.

While many roses are hardy against fungal disease, it's best to water and fertilize early enough in the day for the leaves to dry before sundown, as this will make your roses less susceptible to powdery mildew and leaf spot.
