

SPI-MAX SPRAY MARKER

PROVIDES A TEMPORARY VISUAL IDENTIFICATION OF AREAS THAT HAVE BEEN TREATED BY APPLICATOR

Prokoz Spi-Max Spray Marker is a proprietary colorant blend used as a visual aid to help determine what areas have been covered by the applicator. For use with pesticides, fertilizers, and PGR foliar applications on turfgrass and other non-crop vegetation sites with all types of spray equipment. Prokoz Spi-Max Spray Marker is blue and leaves a temporary visual identification of the areas already treated by the applicator. Avoid the added cost of over applications from overlapping spray patterns, and make sure no areas are being skipped, saving you the time and expense of unwanted callbacks.

Active Ingredient

Proprietary colorant blend

Packaging

2 x 2.5 GL / CS

Application Sites

Turfgrass and other non-crop vegetation sites.

Application Rates

14 to 32 oz. / acre.

.28 to .64 oz. / gallon based on a 50 gallon / acre spray rate.

Benefits

- Helps in eliminating overspray of pesticides, fertilizers, and PGRs.
- Avoid costly and time-consuming customers' call backs, know where you have and haven't applied spray.
- Excellent as a training tool when used with water only.
- Not permanent, temporary markings only.
- Equipment and other non-target areas can be cleaned up with water.
- Customer can easily see where you have applied spray.
- Excellent in bareground applications.

Important

Not intended for use on edible crops.
