

Sunshine Harvest

POTASSIUM SULFATE

0-0-50

Best for potassium deficiency and pH
to use is suggested

- acting
- des energy for proper plant growth
- ngthens immune system building better stems and stalks
- s regulate efficient water usage
- nces plants protein synthesis and activates enzyme function
- otes sturdy stems and deeper roots
- oves plants color and vegetable flavor
- ase yield and quality by regulating water, oxygen and CO2 exchange
- s healthier lawns

ation and ingestion. Use eye
k when handling. Prolonged
rritation of eyes, nasal
eep away from children and
ust may be harmful to your
ystem and kidneys.

APPLICATION RATES: Avoid fertilizer application during hot and dry conditions. Irrigate thoroughly after fertilizer application. Some governments may restrict the application rates of fertilizers on lawns. Check with local and state officials for maximum application rates when applying fertilizers. The application rate depends on the quality of your soil. A soil test is recommended prior to application. Preferably apply pre-plant and incorporation in soil by tilling. Recommended maximum application rate for deficient soil is 2 lbs. per 1,000 sq. ft. Retest 60 days after any application to retest. If you still have a deficiency, make another application in the fall or the following season. To use, dissolve 0.2 pounds or 6 tablespoons per gallon of water and apply 1 gallon per 100 sq. ft. At the recommended rate of 2 lbs. per 1000 sq. ft., 40 lbs. will cover approximately 20,000 sq. ft.

STORAGE AND HANDLING: Keep stored in a dry and low humidity location for long term storage.
