insects, irrigate with 0.25 to 0.5 inch of water immediately after application. Target insects must be exposed to the insecticide to be controlled. For optimum control of surface-suitable equipment for turfgrass pests according to the rates listed in the Application Rates for Insecticide as a broadcast application using a conventional hydraulic boom-type sprayer or other uniform coverage is essential. Begin applications when pests are evident. Apply Suspend SC suspension, or sufficient volume of foam directly into gallery entrance holes. Following treatment, the entrance holes may be left open 24 hours to be certain that returning adult bees are killed. When there is no activity, the hole may be sealed with a suitable sealant.

For control of carpenter bees in structures, apply a 0.06 % suspension or sufficient volume of foam directly into gallery entrance holes. Following treatment, the entrance holes may be left open 24 hours to be certain that returning adult bees are killed. When there is no activity, the hole may be sealed with a suitable sealant.

For control of carpenter ants in houses and other structures, use a 0.06 % suspension and apply as a general surface, spot, crack and crevice or wall void application. Apply around doors and windows and other places where carpenter ants may enter the premises. Spray or foam into cracks and crevices. For control of carpenter ants in houses and other structures, use a 0.06 % suspension and apply as a general surface, spot, crack and crevice or wall void application. Apply around doors and windows and other places where carpenter ants may enter the premises. Spray or foam into cracks and crevices.

For protection of firewood from carpenter ants and termites, treat soil beneath firewood prior to moving. In addition, spray or foam around the base of the firewood within a distance of 1 foot. If firewood is in contact with the ground, it should be raised off the ground and at least 6 inches above the ground. Remove carton nest material from trees when such nests are found. If firewood is in contact with the ground, it should be raised off the ground and at least 6 inches above the ground. Remove carton nest material from trees when such nests are found. If firewood is in contact with the ground, it should be raised off the ground and at least 6 inches above the ground. Remove carton nest material from trees when such nests are found.

Mole cricket control. Mole crickets can be controlled with a 0.06 % suspension or foam. Use the recommended rate suspension converted to a foam to achieve the desired coverage. Thorough coverage of the mole cricket control area is essential. Mole cricket control may be achieved using a variety of moisture levels under a wide range of environmental conditions. It is recommended to avoid applying Suspend SC Insecticide during the water irrigation cycle. Mole cricket control may be achieved using a variety of moisture levels under a wide range of environmental conditions. It is recommended to avoid applying Suspend SC Insecticide during the water irrigation cycle.

Turfgrass Applications:

- Suspend SC Insecticide has been found to be compatible with many commonly used turf management practices. Suspend SC Insecticide is compatible with most other pesticides, fungicides, and herbicides. Use the recommended rate suspension converted to a foam to achieve the desired coverage. Thorough coverage of the mole cricket control area is essential. Mole cricket control may be achieved using a variety of moisture levels under a wide range of environmental conditions. It is recommended to avoid applying Suspend SC Insecticide during the water irrigation cycle. Mixing Instructions:

Shake container well before using. When diluting, it is recommended to add approximately half the water to the spray tank, then add the proper amount of Suspend SC Insecticide in accordance with the rate guide table. Use a low pressure system with a fan-type nozzle to uniformly apply spot treatments. For control of above-ground termites and wood-infesting beetles in localized areas, apply a 0.06% suspension to the soil around the base of the infested area and add 20.25 fl. oz = 7.5 milliliters per 1,000 sq. ft. For control of swarming or reproductive stages of termites, apply a 0.06% suspension to the soil around the base of the infested area and add 75-150 fl oz/100 gals per 1,000 sq. ft. If the treatment is to be repeated, use 1.5 ounces of 0.06% Suspend SC Insecticide per 1,000 sq. ft. or 1.5 fl. oz/1000 sq. ft. The purpose of such applications of Suspend SC Insecticide is to kill workers or winged reproductive termites. It is important to keep the spray directed away from electrical conduits, electrical boxes, and electrical outlets. For control of above-ground termites inside trees, utility poles, fencing and decking materials and electrical conduits, electrocuting shock may occur. Termites are also attracted to electrical boxes and electrical outlets, which can result in electrocuting shock. For control of drywood termites, drywood termites can be killed by applying an even, symmetrical brushing pattern in an alternating back and forth motion. For control of dampwood termites, dampwood termites can be killed by applying an even, symmetrical brushing pattern in an alternating back and forth motion. For control of other insect pests, use a low pressure system with a pinpoint or variable pattern nozzle to evenly apply spot treatments. Do not apply to animal feed or watering equipment. Do not make applications during rain. Do not make applications near food/feed processing plants, cafeterias and similar facilities. Wash all utensils and cutting equipment thoroughly and rinse with clean water.
Suspend SC Insecticide is intended to be mixed with water and applied with hand or power operated sprayers, such as Actisol® or similar equipment, as a coarse spray or drench to kill outdoor pests. Mixing Instructions:

GENERAL INFORMATION:

ENVIRONMENTAL HAZARDS

This material is not intended for use on food or feed producing or processing equipment and thoroughly rinse with clean, fresh water. After application to bakeries, clean all food contact surfaces thoroughly with appropriate equipment. In food/feed and non-food/non-feed areas of food/feed handling and processing establishments as a residual or perimetric treatment, use in accordance with the pest control plan and specific directions on the label. No application to food shall be made in the food/feed handling areas when food is covered or removed from the area being treated. Do not apply directly to food.

DIRECTIONS FOR USE

Suspend SC Insecticide is intended for use in pest control programs of food/feed producing and processing establishments. It may be used as a crack and crevice treatment to areas where these pests normally inhabit. Care should be taken to limit spot treatment to localized areas. For residential buildings and structures apply only as a crack and crevice or perimetric treatment. The foundation or perimeter of a building should be treated prior to 1 foot of any accumulated debris and weeds. Apply directly as a dust to cracks, crevices and infested floor coverings. Use a dust such as Deltadust® in areas around doorways, basements and attics where pests are entry points. Spot treat where pests are found or normally occur. For general pest control outdoors see labels of these products.

Other than applications to building foundations, all outdoor applications to impervious surfaces such as sidewalks, driveways, patios, porches and structural surfaces (such as windows, doors, and eaves) are limited to spot and crack-and-crevice applications only. Except for the perimetric treatment, treatments to building foundations up to 2 to 3 feet high are permitted for fire ants, fire termites, ants and silverfish.

For control of ground foraging termites, ants, gnats, mites, and flying insects around and adjacent to structures and treat the foundation to a height of 2 to 3 feet. Mix 0.25-1.50 gallons (7.6-37.5 liters) of water per 50 gallons (190 liters) of water as directed on the label.

PRECAUTIONARY STATEMENTS

• Call a poison control center or doctor for further treatment advice.

• Preparations are for use on the exterior of structures to control listed pests. Not for indoor use.

• Do not use for termite control.

• Keep out of reach of children.

• Do not apply with water or other spraying equipment.

• Do not contaminate water, food or feed by storage or disposal of the insecticide.
insects, irrigate with 0.25 to 0.5 inch of water immediately after application.

Turfgrass Sites table. Apply using a minimum of 2 gallons of water per 1000 sq. ft. Higher volumes suitable equipment for turfgrass pests according to the rates listed in the Application Rates for Insecticide as a broadcast application using a conventional hydraulic boom-type sprayer or other trial buildings.

Termite carton nests in trees may be injected with 0.06% suspension or foam using a pointed injection for optimimum control of termite. DO NOT treat firewood with this product.

For control of carpenter ants in houses and other structures, use a 0.06% suspension and apply as stacking with a 0.06% suspension at 1 gallon per 8 square feet to prevent carpenter ant or termite infestation. DO NOT treat firewood with this product.

NOTE: In New York State, product may not be applied to turf within 100 feet of a coastal property. For control of ants tunneling beneath the surfaces of buildings, driveways or other hard surfaces, use a 0.06% suspension at 1 gallon per 8 square feet to prevent carpenter ant or termite infestation. DO NOT treat firewood with this product.

Landscape Ornamental Treatments:

Insecticidal dusts can be used on a range of pests in landscape ornamentals. For control of ants, boric acid is an acceptable agent for the application. For the control of ants and other related pests in ornamentals and non-structural masonry, use a 0.06% suspension at 1 gallon per 8 square feet to prevent carpenter ant or termite infestation. DO NOT treat firewood with this product.

By using this product, user or buyer accepts the following Conditions, Disclaimer of Warranties and Limitation of Liability.

STORAGE & DISPOSAL

PESTICIDE DISPOSAL:

If product is empty, dispose of in accordance with local regulations. If product is not empty, report for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse procedure two or more times. Offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or if allowed by State and local authorities, by burning. If container is leaking and/or material is spilled, on floor or paved surfaces, absorb with saw dust or vermiculite, or keep in place by covering with inert material, then clean up with bristles or vacuum. Use caution when cleaning up spilled material to avoid inhaling dust. Offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or if allowed by State and local authorities, by burning. If container is leaking and/or material is spilled, on floor or paved surfaces, absorb with saw dust or vermiculite, or keep in place by covering with inert material, then clean up with bristles or vacuum. Use caution when cleaning up spilled material to avoid inhaling dust.

STORAGE:

Concentrate is stable at normal storage temperatures.

The directions for use of this product are believed to be adequate and must be followed carefully. The product's effectiveness may be reduced if it is not used in accordance with the label directions.

DO NOT apply Suspend SC Insecticide through any type of injection system.

Thorough coverage is required for best control. Surfaces or materials not being sprayed "must not be covered with mists" and be dry. DO NOT apply Suspend SC Insecticide where water is expected to be present. DO NOT apply Suspend SC Insecticide to areas where water is expected to be present.

IMPORTANT: READ BEFORE USE

The directions for use of this product are believed to be adequate and must be followed carefully. The product's effectiveness may be reduced if it is not used in accordance with the label directions.

DO NOT apply Suspend SC Insecticide through any type of injection system.

If product is empty, dispose of in accordance with local regulations. If product is not empty, report for recycling, if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse procedure two or more times. Use caution when cleaning up spilled material to avoid inhaling dust.
insects, irrigate with 0.25 to 0.5 inch of water immediately after application. Canopies and/or turfgrasses must be maintained under high mowing heights. Allow sufficient time for the application to dry before allowing pets or people to enter the treatment area. Target insects must be exposed to the insecticide to be controlled. For optimal control of surface-feeding insects in turfgrass sites, apply using a minimum of 2 gallons of water per 1000 sq. ft. Higher volumes may be needed to ensure proper physical compatibility of the mixture. Tank mixing of Suspend SC Insecticide with other pesticide and fertilizer products is not recommended. When tank mixing Suspend SC Insecticide, observe all restrictions and warning labels. Do not mix Suspend SC Insecticide with any formulation containing oil. If the mixture separates, do not use. Handle the mixture with care and do not allow it to come in contact with the skin. Tank mixing: Mix the correct proportion of products and water in a quart jar and thoroughly mix with a magnetic agitator. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate sealed with a suitable sealant.

Foam Application Use Directions:

Suspend SC Insecticide. For optimal performance, use foam application at least 3 days prior to delay irrigation or mowing. Application rates are dependent on foaming agent. Foams may be used with all types of Suspend SC Insecticide. Foam application can be used where it is impractical or undesirable to spray or dab insecticide. For control of carpenter bees in structures, apply a 0.06 % suspension or sufficient volume of foam at intervals of 8 to 12 inches. Establish a uniform vertical barrier at the edge of the treatment area. For control of tunneling carpenter ants in soil, apply a 0.06 % suspension as a drench or inject the suspension or foam into the soil. Do not apply Suspend SC Insecticide through any type of irrigation system. Use of this product in residential lawns and ornamentals should not exceed the rate of 0.175 gallons per 1000 sq. ft. Suspend SC Insecticide does not provide control of subterranean ants except for those that feed in soil. For protection of firewood from carpenter ants and termites, treat soil beneath firewood prior to movement. Remove carton nest material from trees when such nests are found.

insects, irrigate with 0.25 to 0.5 inch of water immediately after application. Application to dry before allowing pets or people to enter treatment area.

Suitable equipment for turfgrass pests according to the rates listed in the Application Rates for Uniform coverage is essential. Begin applications when pests are evident. Apply Suspend SC Insecticide using an appropriate treatment tool with a splashback guard. Multiple injection points to varying depths may be necessary. It is desirable to physically establish a uniform vertical barrier at the edge of soil zones where ants are tunneling beneath the surfaces.

For protection of firewood from carpenter ants and termites, treat soil beneath firewood prior to establishment of firewood. For control of carpenter bees in structures, apply a 0.06 % suspension or sufficient volume of foam of walls, driveways or other hard surfaces where ants are tunneling beneath the surfaces.

Apply Suspend SC Insecticide with the required amount of water according to the Application Rates for Ornamentals table below. Thoroughly apply the finished spray to upper and lower leaf surfaces to ensure adequate coverage, but prior to dripping. Be sure to penetrate dense foliage to wet leaves, cutworms and webworms.

Suspend SC Insecticide has been found to be compatible with many commonly used miticides, herbicides, fungicides, and crop protectants. Be sure to read the entire Directions for Use, Conditions, Disclaimer of Warranties and Limitations of Liability on this label before using the product. Failure to follow all directions on this label can result in ineffectiveness or other unintended consequences. Bayer CropScience LP is not responsible for crop injury, ineffectiveness or other unintended consequences caused by factors such as weather conditions, presence of other materials, or the manner of use or application. All of these factors may alter the effectiveness of this product. All risk associated with use of this product are borne by the user.

NOTES:

- Do not apply in classroom when in use.
- Do not apply in any room occupied by patient(s) when in use.
- Do not apply in hospital patient rooms while occupied or in any room occupied by patient(s) when in use.
- Do not apply in any room occupied by human beings or animals while in use.
- Do not use in or near food processing or food storage areas.
- Do not use in or near drinking water supplies.
- Do not contaminate water sources when applying this product. Keep out of reach of children.
