

IGR MATH

Pyriproxyfen (juvenile hormone analog)

Novaluron (chitin synthesis inhibitor)

Greater than the sum of its parts.

Tekko™ Pro Insect Growth Regulator from Control Solutions provides effective, long-term control of fleas, roaches, flies, mosquitoes, gnats, crickets, litter beetles, and ants. Tekko Pro is unlike any other IGR available with **two** insect growth regulator active ingredients: Pyriproxyfen, a juvenile hormone analog and Novaluron, a chitin synthesis inhibitor. Through **Combination Chemistry™** multiple active ingredients with different modes of action are formulated into innovative, new products. Tekko Pro prevents fleas and listed cockroaches from developing into egg-laying adults. One treatment inhibits reproduction of listed pests for up to seven months.
