

Contains thiophanate-methyl, the active ingredient used in Cleary 3336®.

FUNGICIDE

TALARIS™ 50 WSP

POWERFUL PREVENTATIVE & CURATIVE CONTROL

Don't let diseases take over, take action with Talaris™ 50 WSP. When diseases invade valuable turf and ornamentals, rely on the powerful preventative and curative action of Talaris 50 WSP. This systemic fungicide is a popular choice for its versatility; it is effective on turf, home lawns, athletic fields, recreation areas, bedding plants, ground covers, golf courses and more. This product is tank mix compatible with many other fungicides, insecticides and nutritional products, making it easy-to-use for professional applicators. Talaris 50 WSP targets a variety of damaging fungal diseases including anthracnose, brown patch, dollar spot, and more. Its wide spectrum disease control makes it an excellent rotational fungicide. To grow healthy turf and beautiful ornamentals, make the smart choice and turn to Talaris 50 WSP.

KEY BENEFITS

- Preventative, curative, and systemic properties for powerful control
- Targets a wide variety of fungal diseases including snow mold, dollar spot, leaf blight and more
- Easy-to-apply with range of application methods; including spray, drench, dip and irrigation system

KEY USES

- Athletic Fields
- Bedding Plants
- Commercial Horticulture
- Foliage
- Golf Courses
- Home Lawns
- Perennial flowers
- Recreation Areas
- Turf
- Vegetable Transplants

Refer to label for specific use restrictions.

PRODUCT NOTES

EPA REGISTRATION NUMBER
87373-5-91234

ACTIVE INGREDIENT
Thiophanate-methyl 50.0%

FORMULATION
Wettable Powder

FRAC NUMBER
1

SIGNAL WORD
Caution

PACKAGE SIZE
6 x 4 x 8 wt oz

RESTRICTED USE
No

RESISTANCE MANAGEMENT

For resistance management, Talaris 50 WSP contains a Group 1 fungicide. Any fungal population may contain individuals naturally resistant to Talaris 50 WSP and other Group 1 fungicides. Appropriate resistance-management strategies should be followed.

To delay fungicide resistance, take one or more of the following steps:

- Rotate the use of Talaris 50 WSP or other Group 1 fungicides within a growing season sequence with different groups that control the same pathogens. Atticus, LLC does not recommend the use of products containing thiabendazole in combination or rotation with Talaris 50 WSP. These utilize similar chemistry and mode of action and can contribute to development of disease tolerance.
- Use tank mixtures with fungicide from a different group that are equally effective on the target pest when such use is permitted. Use at least the minimum application rate as labeled by the manufacturer.
- Adopt an integrated disease management program for fungicide use that includes scouting, uses historical information related to pesticide use, and crop rotation, and which considers host plant resistance, impact of environmental conditions on disease development, disease thresholds, as well as cultural, biological and other chemical control practices.
- Where possible, make use of predictive disease models to effectively time fungicide applications. Note that using predictive models alone is not sufficient to manage resistance.
- Monitor treated fungal populations for resistance development.
- Contact your local extension specialist or certified crop advisor for any additional pesticide resistance-management and/or IPM recommendations for specific crops and pathogens.

KEY DISEASES

Anthracnose
Bermudagrass Decline
Blights
Brown patch
Copper spot
Crown and Root Rots
Dollar spot
Fusarium
Gray leaf spot
Leaf spot
Necrotic Ring Spot
Pink snow mold
Red thread
Rust
Smut
Snow mold
Summer patch
Take all patch
