

Contains fludioxonil, the active ingredient used in Medallion® SC.

FUNGICIDE

RAPID ON-CONTACT DISEASE CONTROL

For on-contact disease control, Token™ SC delivers fast-acting, trusted performance against major turf diseases. Token SC effectively controls certain foliar, stem, and root diseases in turfgrass areas including golf courses, commercial and residential lawns, sod farms, sports fields, parks, and more. The active ingredient, fludioxonil, has a unique mode of action that affects fungal spores on the leaf and beneath the soil surface. When Token SC encounters fungal spores, it triggers spores to rapidly absorb water to the point of explosion. Token SC is ideal for quick reduction of disease pressure, destroying disease spores before they can spread. Plus the liquid suspension concentrate formulation makes mixing and application easy.

KEY BENEFITS

- Reduces disease pressure quickly with on-contact activity
- Easy-to-apply suspension concentrate formula
- Broad-spectrum control of major turf diseases

KEY USES

- Commercial lawns
- Golf courses
- Parks and Recreation areas
- Residential lawns
- Sod farms
- Sports fields

Refer to label for specific use restrictions.

PRODUCT NOTES

EPA REGISTRATION NUMBER
91234-133

ACTIVE INGREDIENT
Fludioxonil 11.8%

FORMULATION
Suspension Concentrate

FRAC NUMBER
12

SIGNAL WORD
Caution

PACKAGE SIZE
4 x 1 qt

RESTRICTED USE
No

MIXING PROCEDURES

Prepare no more mixture than is needed for the immediate operation. Thoroughly clean the spray equipment before using Token SC. Agitation is necessary to maintain uniformity of the Spray mixture. Maintain maximum agitation throughout the spraying operation. Do not let the spray mixture stand overnight in the spray tank. Flush the spray equipment thoroughly following each use and apply the rinsate to a previously treated area.

Token SC Alone: Add 1/3 of the required amount of water to the spray or mixing tank. With the agitator running, add the required amount of Token SC into the spray tank all at once. Continue agitation while adding the remainder of the water. Begin application of the spray solution after the material has completely dispersed into the mix water. Maintain agitation until all of the mixture has been applied.

Token SC + Tank Mixtures: To determine the physical compatibility of Token SC with other products, use a jar test, as described below.

Jar Compatibility Test: Using a quart jar, add the proportionate amounts of the products to 1 qt. of water. Add wettable powders and water-dispersible granular products first, then liquid flowables, and emulsifiable concentrates last. After thoroughly mixing, let stand for at least 5 minutes. If the combination remains mixed or can be remixed readily, it is physically compatible. Once compatibility has been proven, use the same procedure for adding required ingredients to the spray tank.

To determine biological compatibility with other products, mix the products in the desired proportions, apply per label directions on a small area or small number of plants for phytotoxicity prior to widespread use.

This product may not be mixed with any product which prohibits such mixing. Tank mixtures are permitted only in those states where the tank-mix partner is registered. It is the pesticide user's responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

Add 1/3 of the required amount of water to the spray or mixing tank. With the agitator running, add the required amount of Token SC into the tank. Continue agitation while adding the remainder of the water. Then add the specified amount of other products for tank mixture and allow them to become completely dispersed. Continue agitation to maintain a uniform suspension until all of the spray solution has been applied.

KEY DISEASES

Anthracnose
Bentgrass dead spot
Brown patch
Brown ring patch
Gray leaf spot
Leaf spot
Rhizoctonia leaf and sheath spot
Snow mold, gray
Snow mold, pink
Summer patch
Yellow patch
