Your [Xpert Winterizing Kit](#) is an easy and effective way to combat overwintering pests. Read below for a step-by-step guide to using your kit.

### Your kit includes:

- 1 bottle of [PestXpert Foaming Insect Killer](#)
- 1 bottle of [PestXpert Home Barrier Insect Killer Concentrate](#)
- 1 bottle of [CimeXa Insecticide Dust](#)
- 1 [Bellow Hand Duster](#)

## STEP 1 Create Your Mixture

To begin, grab your bottle of PestXpert Home Barrier Insect Killer Concentrate, and a hand pump sprayer (not included in the kit). Wearing gloves:

- Add half a gallon of water to your hand pump sprayer
- Add 4 ounces of PestXpert Home Barrier Insect Killer Concentrate to the sprayer
- Add an additional half a gallon of water to your sprayer
- Add the cap to your sprayer and shake vigorously to combine the water and PestXpert Home Barrier Insect Killer Concentrate

## STEP 2 Apply the PestXpert Home Barrier Insect Killer Concentrate

Now it's time to treat your home. Be sure to wear long sleeves, closed-toe shoes, gloves, and safety goggles while performing your treatment. Walk the perimeter of your home or structure and focus on these areas:

- Apply a spray 3 feet-up and 3 feet-out from the foundation of your structure
- Treat patios and decks, paying close attention to cracks and crevices
- Spray dense shrubs and bushes and beneath trees
- Spray around the garage door and around door and window frames

Concentrate spot treatments around the sides of the home that receive full sunlight or afternoon sunlight, as this is where overwintering pests, such as Asian lady beetles and stink bugs, like to congregate.

The product-water mixture will cover 1,000 – 1,500 square feet (depending on target pests and how heavily the mixture is applied). Reapply every 30-60 days as needed.

Be sure to keep children and pets away from areas being treated until the spray has dried (typically 1-2 hours). Do not spray when pollinators are active and/or when winds will carry the spray toward pollinators.

### **STEP 3** Apply CimeXa Dust with Bellow Hand Duster

Fill your Bellow Hand Duster half-way with CimeXa Insecticide dust. Then, turn the duster upside down (black top facing down) and apply 1-2 small puffs of dust to the following areas:

- In cracks and crevices around the structure and foundation
- In wall voids, behind electrical outlets
- In attics near eaves and vent pipes
- Along baseboards where carpet meets the baseboard, where the wall meets the baseboard, and in the corners and cracks of the baseboard
- Behind wall fixtures

### **STEP 4** Apply PestXpert Foaming Insect Killer

PestXpert Foaming Insect Killer comes in an aerosol can, so it does not need to be mixed with water. Wearing gloves and protective goggles, apply PestXpert Foaming Insect Killer in the following places:

- Into cracks and crevices around the structure and foundation
- Around eaves and soffits
- Around doors and windows
- Along gutters
- In weeping holes
- In the vertical seams in vinyl siding

Be sure not to get any product into gutters that drain into sewers or storm drains, lakes, or other bodies of water, as the product is toxic to aquatic life.

If you have any questions on how to use any of the products in your kit, give us a call at 866-581-7378 or email us at [support@domyown.com](mailto:support@domyown.com).
