Blossom End Rot**

- Correct Calcium Deficiencies
- Mix 2 tbsps. per 1 gal. of water

**NET CONTENTS ONE PINT (16 FL. OZS. / 473 ML)
DENSITY 10.7 LBS/GAL**

SHAKE WELL BEFORE USING**1. WHAT IS THIS PACKAGE FOR?**

ferti•lome® developed this product to help stop blossom-end rot of Tomatoes. Blossom-end rot of tomatoes is caused by the lack of sufficient calcium in the blossom end of the fruit. This disorder is usually most severe following extremes in soil moisture (either too dry or too wet). Blossom-end rot can be recognized by the dark grey black-sunken area on the blossom-end (bottom) of Tomatoes. Blossom-end rot can be small or cover almost half the fruit and will decrease your Tomato yield.

ferti•lome® **YIELD BOOSTER** can also be used to help your Tomatoes and other plants correct known calcium deficiencies.

2. HOW DO YOU USE IT?

Mix 2 tablespoons (1 fluid ounce) with 1 gallon of water to stop blossom-end rot. Apply as a uniform spray to foliage and developing fruit. Make a spray application once every 7 days until 3 or 4 applications have been made. Apply in early morning when temperatures are cool to avoid burning foliage. Do not apply to plants under stress conditions. Regular spraying throughout the season is not recommended as these prolonged spray programs can cause foliage burn. **ferti•lome® YIELD BOOSTER** is compatible with many other insecticides and fungicides.
