**Re: ZeroTol 2.0 – Chemical Composition  
(EPA Reg. No. 70299-12)**

To Whom It May Concern;

The BioSafe Systems product- ZeroTol 2.0, registered with US EPA is a stabilized solution concentrate, containing the active ingredients hydrogen peroxide at a concentration of 27.1% and peroxyacetic acid at a concentration of 2.0%. Both active ingredients in ZeroTol 2.0 fall within the upper and lower certified limits as stated on the Confidential Statement of Formulation on file with the U.S. EPA.

In addition, ZeroTol 2.0 also contains less than 5% acetic acid and a proprietary blend of buffers and stabilizers at a concentration of less than 1% in the final formulation. The proprietary buffers and stabilizers are found on the US EPA's "List 4A- Minimal Risk Inert Ingredients" and are considered non-hazardous.

Upon contact with materials such as plant tissue, organic matter, and microorganisms, hydrogen peroxide and peroxyacetic acid break down immediately into water, oxygen and acetic acid. Acetic acid breaks down to carbon dioxide and water. None of the moieties resulting from degradation pose any toxicological concern.

Sincerely,

*Jeff Sanderson*
