**Group 4A Insecticide**

**For control of listed chewing and sucking insects infesting landscape ornamentals and turf.**

For outdoor use only.

**ACTIVE INGREDIENT:**
- Dinotefuran*, N-methyl-N-nitro-N-*[tetrahydro-3-furanyl]methyl*guanidine .................................. 10%

**OTHER INGREDIENTS:** .................................. 90%

* *0.89 pounds Dinotefuran per gallon.

**KEEP OUT OF REACH OF CHILDREN**

**CAUTION**

**READ THE ENTIRE LABEL FIRST. OBSERVE ALL PRECAUTIONS AND FOLLOW DIRECTIONS CAREFULLY.**

**PRECAUTIONARY STATEMENTS**

**Hazards to Humans and Domestic Animals**

**CAUTION:** Harmful if swallowed or absorbed through skin. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using the toilet. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Avoid breathing spray mist. Remove and wash contaminated clothing before reuse.

**Personal Protective Equipment (PPE)**

Applicators and other handlers must wear:
- Long-sleeved shirt and long pants
- Chemical-resistant gloves made of any waterproof material such as polyethylene or polyvinyl chloride
- Shoes plus socks

**User Safety Requirements**

Follow manufacturer’s instructions for cleaning/maintaining PPE. If no such instructions exist for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

**First Aid**

**Environmental Hazards**

This pesticide is toxic to shrimp. Do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Do not apply when weather conditions favor drift from treated areas. Drift and runoff from treated areas may be hazardous to aquatic organisms in water adjacent to treated areas. Do not dispose equipment washwaters or rinsate into a natural drain or water body.

This compound is toxic to honey bees. The persistence of residues and potential residual toxicity of Dinotefuran in nectar and pollen suggests the possibility of chronic toxic risk to honey bee larvae and the eventual instability of the hive.

This product is toxic to bees exposed to treatment for more than 38 hours following treatment. Do not apply this product to blooming, pollen-shedding or nectar-producing parts of plants if bees may forage on the plants during this time period, unless the application is made in response to a public health emergency declared by appropriate state or federal authorities.

Dinotefuran and its degrade, MNG, have the properties and characteristics associated with chemicals detected in ground water. The high water solubility of dinotefuran, and its degrade, MNG, coupled with its very high mobility, and resistance to biodegradation indicates that this compound has a strong potential to leach to the subsurface under certain conditions as a result of label use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination. Periodic monitoring of shallow groundwater in the use area is recommended.

**Spray Drift Advisory**

Do not apply under conditions involving possible drift to food, forage or other plantings that might be damaged or the crop thereof rendered for sale, use, or consumption.

**DIRECTIONS FOR USE**

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

READ ENTIRE LABEL. USE STRICTLY IN ACCORDANCE WITH PRECAUTIONARY STATEMENTS AND DIRECTIONS, AND WITH APPLICABLE STATE AND FEDERAL REGULATIONS.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

Do NOT use this product for manufacturing or formulating into other end-use products.

**Agricultural Use Requirements**

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170.

This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, greenhouses and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval and notification to workers. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.
Agricultural Use Requirements (cont.)
Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 12 hours.
PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with any-thing that has been treated, such as plants, soil or water is:
• Coveralls
• Chemical resistant gloves made of any waterproof material such as polyethylene or polyvinyl chloride
• Shoes plus socks

Non-Agricultural Use Requirements
The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricult-ural pesticides (40 CFR part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.
Do not allow others to enter treated areas until sprays have dried.

1. Product Information
Failure to follow directions and precautions on this label may result in plant injury, poor insect control, and/or unacceptable residues. For outdoor use only.

Apply Zylam® Liquid Systemic Insecticide when insect pest populations begin to build, but before populations reach economically damaging levels. Economic thresholds for pests controlled by Zylam Liquid Systemic Insecticide may be available from your local pest manage-ment authorities.
Zylam Liquid Systemic Insecticide is a selective insecticide which should have minimal impact on beneficial arthropods and its use is compatible with integrated pest management (IPM) programs. However, Zylam Liquid Systemic Insecticide is toxic to bees exposed to direct treatment or to residue on blooming plants and weeds. Do not apply Zylam Liquid Systemic Insecticide or allow it to drift onto blooming plants if bees are actively foraging in the treated area.
Zylam Liquid Systemic Insecticide is taken up into foliage after applica-tion. However, thorough spray coverage is essential for optimal performance. Apply Zylam Liquid Systemic Insecticide in sufficient water to ensure good coverage.
Zylam Liquid Systemic Insecticide may aid in the suppression of some pests. Suppression can mean either inconsistent control (good to poor), or consistent control at a level below that generally considered acceptable for commercial control.

If the maximum season limit of Zylam Liquid Systemic Insecticide has been applied and pest populations require additional treatment, use another registered pesticide that is not in the neonicotinoid class of nitrogenamide subclass of chemistry.

Application to Ornamental Plants:
Zylam Liquid Systemic Insecticide can be applied as a soil drench, soil injection, bark banding, foliar spray, and broadcast spray treatment for insect control in landscape ornamental plants.
Zylam Liquid Systemic Insecticide is a systemic product and will be taken up by the root system and foliage and translocated upward throughout the plant. When applied as a foliar spray, the product offers translaminar and locally systemic control of foliar pests.
When applied as a soil injection or drench to plants with woody stems, systemic activity will be delayed until the product can be translocated throughout the plant. Make applications prior to buildup of the target pest.
For outdoor and landscape ornamentals, broadcast applications cannot exceed a total of 39 fl. oz. of Zylam Liquid Systemic Insecticide per acre per year as foliar sprays or 79 fl. oz. per acre per year as soil applications or bark banding.

Application to Turfgrass:
Zylam Liquid Systemic Insecticide can be used for the control of soil inhabiting pests of turfgrass such as Masked Chafer, European Chafer, Green June Beetle, May or June Beetle, Japanese Beetle, Oriental Beetle, Billbugs, Annual Bluegrass Weevil, Black Turfgrass Ateenia, Ants (not including fireants) and Mole Crickets. Zylam Liquid Systemic Insecticide can also be used for surface feeding insects such as: armyworms, cutworms and chinchbugs in turfgrass areas.
Zylam Liquid Systemic Insecticide can be used as directed on outdoor residential, recreational and commercial turfgrass in sites such as home lawns, commercial lawns, multi-family residential and apartment complexes, grounds or lawns around business and office complexes, shopping centers, airports, military and other institutions, cemeteries, golf courses, playgrounds, parks, athletic fields and sod farms.

Timing of Zylam Liquid Systemic Insecticide applications must be targeted at or just prior to or during egg laying of the target pests. The need for an application can be based on historical and/or physical monitoring of the site, current season adult monitoring, previous experience or other methods. Optimum control will be achieved when applications are made prior to or at egg hatch of the target pests followed by sufficient irrigation or rainfall to move the active ingredient through the turf thatch layer. Consult your local State Extension Service for more specific application timing recommendations.
Do not apply when the target site is saturated with water. Adequate distribution of the active ingredient cannot be achieved when these conditions exist.

2. Resistance Management
Zylam Liquid Systemic Insecticide contains a Group 4A insecticide. Insect biotypes with acquired resistance to Group 4A may eventually dominate the insect population if Group 4A insecticides are used repeatedly in the same field or in successive years as the primary method of control for targeted species. This may result in partial or total loss of control of those species by Zylam Liquid Systemic Insecticide or other Group 4A insecticides.

To delay insecticide resistance, consider:
• NOT using a foliar application of Zylam Liquid Systemic Insecticide or any insecticide in the neonicotinoid class following an in-furrow or soil application of Zylam Liquid Systemic Insecticide.
• To optimize resistance management practices, no more than 3 applica-tions of Zylam Liquid Systemic Insecticide per growing season are allowed.
• Avoiding the consecutive use of Zylam Liquid Systemic Insecticide or other Group 4A insecticides that have a similar target site of action, on the same insect species.
• Using tank-mixtures or premixes with insecticides from a different target site of action Group as long as the involved products are all registered for the same use and have different sites of action.
• Basing insecticide use on a comprehensive IPM program.
• Monitoring treated insect populations for loss of field efficacy.
• Contacting your local extension specialist, certified pest manage-ment advisors, and/or manufacturers for insecticide resistance managem ent and/or IPM recommendations for the specific site and resistant pest problems.
• For further information or to report suspected resistance, you may contact PBI/Gordon Corporation 1-877-800-5556.

3. Mixing Instructions
Zylam Liquid Systemic Insecticide Alone: Add 1/2 of the required amount of water to the mix tank. With the agitator running, add the desired amount of Zylam Liquid Systemic Insecticide to the tank. Continue agitation while adding the remainder of the water. Begin application of the solution after Zylam Liquid Systemic Insecticide has completely dispersed into the mix water. Maintain agitation until all of the mixture has been applied.
Zylam Liquid Systemic Insecticide + Tank Mixtures: Add 1/2 of the required amount of water to the mix tank. Start the agitator running before adding any tank mix partners. In general, tank mix partners should be added in this order: products packaged in water-soluble packaging, wettable powders, wettable granules (dry flowsables), liquid flowsables, liquids, emulsifiable concentrates, and surfactants/adjuvants. Always allow each tank mix partner to become fully dispersed before adding the next product. Provide sufficient agitation while adding the remainder of the water. Maintain agitation until all the mixture has been applied.
NOTE: When using Zylam Liquid Systemic Insecticide in tank mixtures, all products in water-soluble packaging should be added to the tank before any other tank mix partner, including Zylam Liquid Systemic Insecticide. Allow the water-soluble packaging to completely dissolve and the product(s) to completely disperse before adding any other tank mix partner to the tank.

If using Zylam Liquid Systemic Insecticide in a tank mixture, observe all directions for use, sites, use rates, dilution ratios, precautions, and limi-tations which appear on the tank mix product label. No label dosage rate should be exceeded, and the most restrictive label precautions and limitations should be followed. This product should not be mixed with any product which prohibits such mixing. Tank mixtures or other applications of products referenced on this label are permitted only in those states in which the referenced products are labeled.
Compatibility: NOTE - The plant safety of all potential tank mixes on all plants has not been tested. Before applying any tank mixture not specifically recommended on this label, the safety to the target plants should be confirmed.

Zylam Liquid Systemic Insecticide is compatible with most commonly used pesticides. However, since it is not possible to test all possible mixtures, the user should pre-test to assure the physical compatibility and lack of phytotoxic effect of any proposed mixtures with Zylam Liquid Systemic Insecticide. To determine the physical compatibility of Zylam Liquid Systemic Insecticide with other products, use a jar test, as described below:

Using a quartz jar, add the proportionate amounts of the products to 1 quart of water. Add wettable powders and water-dispersible granular products first, then liquid flowables, and emulsifiable concentrates lasts. After thoroughly mixing, let stand for at least 5 minutes. If the combination remains stable, it can be removed readily. It is physically compatible. Once compatibility has been proven, use the same procedure for additional required ingredients to the spray tank.

4. Application Procedures and Spray Equipment

For ground application only. Select spray nozzles which will provide accurate and uniform spray deposition. Use spray nozzles which provide medium to coarse-sized droplets and reduce drift. To help insure accurate, calibrate sprayer before each use. For information on spray equipment and calibration, consult nozzle manufacturers and/or State Extension Service specialists.

Apply Zylam Liquid Systemic Insecticide using sufficient water volume to provide thorough and uniform coverage. In situations where a dense canopy exists and/or pest pressure is high, use greater water volumes. The use of a spray adjuvant may improve spray coverage.

Restrictions:
- Do not graze treated areas or use clippings from treated areas for feed or forage.
- Do not apply under conditions where uniform coverage cannot be obtained or where excessive spray drift may occur.
- Prevent runoff or puddling of irrigation water following application.
- Do not apply to areas that are water logged or saturated, or frozen, which will not allow penetration into the root zone of the plant.
- Keep children and pets off treated areas until spray has dried.
- Do not use on houseplants grown inside residences.

Applications to ornamental plants: Zylam Liquid Systemic Insecticide can be applied using many different types of application equipment. Apply in sufficient water to ensure good coverage of ornamental plants. When making applications to plants with hard to wet foliage such as holly or pine, the addition of a spreader/sticker is recommended. If a concentrate or mist type spray equipment is used, an equivalent amount of product should be used on the spray area as would be used in a dilute solution. To assure optimum effectiveness, the product must be placed where the growing portion of the target plant can absorb the active ingredient. Applications can be made to foliage or as a soil drench.

Applications to turfgrass: Apply Zylam Liquid Systemic Insecticide through conventional ground spray equipment in a minimum of 1 gallon of finished spray per 1000 sq ft. Ensure adequate distribution in the treated area using accurately calibrated equipment normally used for application of turfgrass insecticides. Use the spray pressure suggested by the equipment manufacturer to produce a uniform, medium to coarse droplet spray. Check calibration periodically to ensure that equipment is working properly and eliminate off target drift. Prevent skips by using marker dyes or foam aids.

5. Recommendations To Avoid Spray Drift

AVOID SPRAY DRIFT AT THE APPLICATION SITE IS THE RESPONSIBILITY OF THE APPLICATOR. The interaction of many equipment and weather related factors determine the potential for spray drift. The applicator is responsible for considering all of these factors when making decisions. Where states have more stringent regulations, they should be observed. Follow these recommendations to avoid spray drift:

1. Make applications when wind velocity favors on-target product deposition (approximately 3 to 10 mph). Do not apply when wind velocity exceeds 10 mph. Avoid applications when wind gusts approach 10 mph.

2. Risk of exposure to sensitive aquatic areas can be reduced by avoiding applications when wind direction is toward the aquatic area.

3. Do not cultivate or plant crops within 25 feet of the aquatic area as to allow growth of a vegetative filter strip.

4. Do not make applications during temperature inversions. Inversions are characterized by stable air and increasing temperatures with increased height above the ground. Mist or fog may indicate the presence of an inversion in humid areas. The applicator may detect the presence of an inversion by producing smoke and observing a smoke layer near the ground surface.

5. Use the largest droplet size consistent with good pest control. Small droplets are more prone to spray drift and can be minimized by appropriate nozzle selection, by orienting nozzles away from the air stream as much as possible, and by avoiding excessive spray boom pressure.

6. Apply as close to target plants as practical to obtain a good spray pattern for adequate coverage.

6. Soil Applications to Landscape Ornamental Plants (drench or injection)

For systemic insect control on landscape ornamental plants in commercial, industrial and residential areas, parks, golf courses, athletic fields, and schools, as a soil drench or soil injection.

Ornamental plants including but not limited to:
- Bedding Plants, Shrubs, Ornaments, Flowering Plants, Foliate Plants, Groundcovers, Evergreens, Ornamental Trees, Non-Bearing Fruit Trees, Non-Bearing Nut Trees, Non-Bearing Vines

Pests:
- Adelgids including Hemlock Woolly, Balsam Woolly
- Aphids including Balsam, Crepe Myrtle, Green Peach, Melon
- Bagworms
- Flattened Borer including Alder, Bronze Birch, Emerald Ash
- Flatheaded Appletree, Two-Lined Chestnut
- Froghoppers
- Fungus Gnats (larvae)
- Horned Oak Gall
- Lacebugs including Azalea, Cotoneaster, Hawthorne, Rhododendron
- Leaf beetles including Elm, Viburnum
- Leafhoppers including Glassy-Winged Sharpshooter, Potato Leafminers including Birch, Boxwood, Holly, Serbian
- Mealybugs including Citrus, Long-Tailed, Madeira, Obscure, Phomium, Pink Hibiscus, Root Pine tip moth (larvae)
- Plantbugs
- Psyllids including Asian Citrus, Boxwood Root Weevils (larvae and adults) including Black Vine, Dianrepes Roundheaded Borer including Euclayptus Longhorned, Linden, Locust (excluding Asian Longhorned)
- Royal Palm Bug
- Sawfly larvae
- Scale (Armored and Soft) including Azalea Bark, Brown Soft, Calico, Cottony Cushion, Cycad Aulacaspis, Cypomertia, Duplichaniasis, Elongate Hemlock, Eounymus, False Oleander, Fig Wax, Fletcher, Florida Red, Florida Wax, Lecanium, Oystershell, Poplar (Aspen), Pine needle, Tea, Tulip Tree
- Spittlebugs
- Thrips including Chilli (suppression), Cuban Laurel, Gladiolus, Gynathyikothrips uzelli (suppression), Western Flower (suppression)
- Treehoppers
- Whiteflies including Ficus, Giant, Greenhouse, Silverleaf / Sweet potato (B and O biootypes)
- White Grubs including Oriental Beetle
- White Pine Weevil

Trees and Shrubs:
- Shrubs: 0.2 to 0.4 fl.oz. per foot of height (2 to 4 fl.oz. per 10 feet of height)
- Trees: Small Trees (Less than 24 inches diameter at breast height) 0.2 to 0.8 fl.oz. per inch diameter at breast height (DBH), Large Trees (24 inches diameter or greater at breast height) 0.4 to 0.8 fl.oz. per inch diameter at breast height (DBH).

For multi-stem trees, base rate on cumulative inches of diameter of all stems at breast height.

For optimal control, apply early in the plant’s annual growing cycle and keep soil mois for at least 7 days after application.

Only apply to moist soil. Do not apply to dry, saturated or frozen soil. Heavy rainfall or inadequate irrigation immediately following application may decrease performance.

Use higher labeled rates for broadleaf evergreens with dense foliage (i.e. hollies).
Soil Drench: Mix required dose in water and uniformly apply to soil around base of shrub or tree. Pull back mulch before drenching. For optimal performance apply at least 1 quart of dilute solutions per foot of height or inch of trunk diameter (example: apply at least 12 quarts or 3 gallons of solution per 12 inches of diameter at breast height (DBH)). If lower drench volume is used, apply 1/2 inch of irrigation immediately after application to move the product into the root zone. Keep soil moist for at least 7 days after application.

Soil Injection: Mix required dose in water and make at least 4 injections per shrub or tree with a low-pressure applicator. Use same amount of solution per hole. Injections can be made using the following methods:

- **Grid system** – Space injections on a 2.5 ft. center extending to drip line.
- **Circle System** – Make injections in concentric circles extending inward from the drip line.
- **Basal System** – Space injection evenly around trunk no more than 12 inches out from the base.

For optimal performance inject at least 1 quart of dilute solutions per foot of height or inch of trunk diameter (example: inject at least 12 quarts or 3 gallons of solution per 12 inches of diameter at breast height (DBH)).

7. Bark Banding Applications to Landscape Ornamental Plants

For systemic insect control on landscape trees and shrubs in commercial, industrial and residential areas, parks, golf courses, athletic fields, and schools, when applied as a trunk spray.

**Product Rate:** 16 fl.oz. of Zylam Liquid Systemic Insecticide plus 1.0 fl.oz. of organosilicone surfactant. Add to 1.0 gallon of water. Do not apply more than 79 fl.oz. of Zylam Liquid Systemic Insecticide per acre per year.

When sprayed on the trunk, Zylam Liquid Systemic Insecticide will be absorbed through the bark and into the vascular system, and then transported throughout the tree. Speed of control will be dependent on tree size, three health, environmental conditions and how actively pests are feeding.

Spray bark on root flare (buttress roots) and on trunk between soil surface and 4 to 5 feet above the soil surface. Adjust nozzle to uniformly distribute spray over the entire circumference of the tree trunk and buttress roots. Wet bark just to the point of saturation and run off onto soil.

Apply with a low volume sprayer operated at 10 to 20 PSI to prevent tree damage, bounce back and drift.

For optimal control, apply to actively growing trees, and timing that Zylam Liquid Systemic Insecticide has had time to move to insect feeding sites at when target life stage is present.

Do not apply to wet bark, during rainfall or if rain is expected within 12 hours.

Control may be less effective in trees with thick bark, and at times when trees are not actively growing or transpiring.

One gallon of spray solution will treat approximately 36 to 40 inches of tree diameter when measured at 4.5 feet above the soil line (DBH). Spray solution on tree trunk between soil surface and 4 to 5 feet above the soil surface. Do not make more than one application per year.

8. Foliar Applications to Landscape Ornamental Plants

For insect control on landscape ornamental plants in commercial, industrial and residential areas, parks, golf courses, athletic fields, and schools.

**Product Rate:** 8 fl.oz. to 16 fl.oz. per 100 gallons. Apply in sufficient water to ensure thorough coverage of target area. Use a minimum of 50 gallons finished spray per acre. Do not apply more than a total of 39.0 fl.oz. of Zylam Liquid Systemic Insecticide per acre per season as foliar sprays. Start treatment prior to buildup of high pest populations.

**Foliar Spray:** 100 gal of spray mix will treat 20,000 sq.ft. of area.

**Soil Drench:** 39.0 fl.oz. of Zylam Liquid Systemic Insecticide per acre per season as soil drench. Keep soil moist for at least 7 days after application. Do not apply more than a total of 39.0 fl.oz. of Zylam Liquid Systemic Insecticide per acre per season as soil drench. Start treatment prior to buildup of high pest populations. Foliar Spray: 100 gal of spray mix will treat 20,000 sq.ft. of area.

**Ornamental plants including:**

- Shrub, Ornamentals, Flowering Plants, Foliage Plants, Groundcovers, Evergreens, Ornamental Trees, Non-Bearing Fruit Trees, Non-Bearing Nut Trees, Non-Bearing Vines.

**Pests:**

- Adelgids including Hemlock Woolly, Balsam Woolly
- Aphids (suppression)
- Japanese beetles (adults)
- Lacebugs including Azalea, Cotoneaster, Hawthorne, Rhododendron
- Leaf beetles including Viburnum
- Leafhoppers including Glassy Winged Sharpshooter, Potato
- Leafminers including Spreneline
- Mealybugs including Citrus, Long-Tailed, Madeira, Obscure, Phormium, Pink Hibiscus
- Psyllids including Asian Citrus
- Root Weevils (adults) including Black Vine, Diapreps
- Sawfly larvae
- Scale (Armed and Soft) including Cytophoma, Cydad Aulacaspis, Elongate, Hemlock, Euonymus, Florida Red, Florida Wax, Tea
- Thrps including Chilli, Gynaikothrips uzeli, Western Flower (suppression)
- Whiteflies including Giant, Greenhouse, Silverleaf / Sweet potato (B and Q biotypes)

9. Application to Turfgrasses

For insect control on outdoor residential, recreational and commercial turfgrass in sites such as home lawns, commercial lawns, multi-family residential and apartment complexes, grounds or lawns around business and office complexes, shopping centers, airports, military and other institutions, cemeteries, golf courses, playgrounds, parks, athletic fields and sod farms.

Target timing of Zylam Liquid Systemic Insecticide applications at or just prior to or during egg laying of the target pests. The need for an application can be based on historical and/or physical monitoring of the site, current season adult trapping, previous experience or other methods. Optimum control will be achieved when applications are made at first appearance or just prior to or at egg hatch of the target pests followed by sufficient irrigation or rainfall to move the active ingredient through the turf thatch layer. Consult your State Extension Service for information regarding specific application timing.

Do not apply when the target site is saturated with water. Adequate distribution of the active ingredient cannot be achieved when these conditions exist.

</tbody>
</table>

Important Notes:

- Apply in sufficient water to ensure thorough coverage of target area. Use a minimum of 50 gallons finished spray per acre.
- Consult your local State Extension Service or State Extension Turfgrass Specialists for more specific information on timing of insecticide applications.
- For optimal absorption, translaminar movement, and control, avoid applications immediately before rainfall or irrigation. For best results, do not irrigate or water for 24 hours after application. If rainfall does not occur in 1 to 2 days after application, irrigate with sufficient water to ensure movement of the active ingredient through the thatch and into the root zone.
- Make only one application.
