

Insect and Pest Control

Please read these instructions carefully and follow all directions to insure both safety and efficacy.

Garscentria is primarily designed as an effective treatment against mosquitoes, ticks, crawling and flying insects of all types and as a repellent against browsing animal pests and birds. Garscentria can be used full strength in a fogger or diluted 10oz per gallon of water for use in a pump sprayer.

For Use Indoors and Outdoors on plants, grass, trees, shrubs, non-potable standing water. Garscentria is safe for use around bees, fish stock, birds, household pets and small animals and livestock.

Method of Application: Direct spray in a handheld sprayer or hose end mixing sprayer or misting and fogging equipment.

When to Apply: It is best to apply Garscentria in the early hours of the day or the late hours of the afternoon to avoid the highest heat of the day. It is best to carefully monitor your local weather to avoid expected rain or excessive wind.

How to Apply: If using a cold or hot fogging device, thoroughly fog the grass, shrub, flower areas and low hanging branches and leaves of trees. We suggest fogging the top of bushes as well as the underside areas. Try to spray all foliage. Garscentria is made from a 300% concentrated garlic liquid and a combination of effective essential oils which are EPA FIFRE 25(b) exempt.

Storage and Disposal: Garscentria can be stored in the sprayer or fogger without causing any issues. Before use, we suggest storing out of the direct sunlight in a cool dry area.

PRECAUTIONARY STATEMENTS: Garscentria does not contain any toxic chemicals. However, standard precautions should always be taken when handling all materials. **KEEP OUT OF REACH OF CHILDREN.** Garscentria may cause skin or eye irritation so avoid direct contact with skin and eyes. It is recommended that protective eyewear and gloves be worn. Please wash hands with soap and water after using if direct contact was made with the Garscentria liquid.
