**CHRONIC TOXICITY**

**Carcinogenicity:** The United States Environmental Protection Agency (EPA) has given glyphosate a Group E classification (evidence of non-carcinogenicity in humans). The Canadian Pest Management Regulatory Agency (PMRA) has classified glyphosate as unlikely to pose a human cancer risk. The European Food Safety Authority (EFSA) has classified glyphosate as unlikely to pose a carcinogenic hazard to humans. In 2015, the International Agency for Cancer Research (IARC) classified glyphosate as a probable human carcinogen Group 2A based on limited human evidence and sufficient evidence in animals.  
**Mutagenicity:** None known  
**Teratogenicity:** None known  
**Reproductive Toxicity:** None known

**POTENTIAL HEALTH EFFECTS:**

**Eyes:** May cause moderate but temporary eye irritation.  
**Skin:** Short-term contact with skin may cause mild irritation. Prolonged contact with skin may lead to swelling, redness and blistering.

**SECTION 12: ECOLOGICAL INFORMATION**

**ENVIRONMENTAL SUMMARY:** Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwaters or rinsate. **The information presented below is on the technical active ingredient, glyphosate.**

**ECOTOXICITY DATA:**

**Fish Acute and Prolonged Toxicity:** Bluegill Sunfish: >24 mg/L (48 hour)  
 Rainbow Trout: 140 mg/L (48 hour)  
**Aquatic Invertebrate Acute Toxicity:** *Daphnia magna*: 780 ppm (48 hour)  
**Aquatic Plant Toxicity:** Not determined  
**Bird Acute and Prolonged Toxicity:** Bobwhite quail: Acute LD50 >2,000 mg/kg  
**Honeybee Toxicity:** >100 ug/bee (oral); practically non-toxic

**ENVIRONMENTAL EFFECTS:**

**Soil Absorption/Mobility:** Even though technical glyphosate is highly water soluble it appears that parent glyphosate and its degradation product, aminomethyl phosphonic acid (AMPA), have a low potential to move to ground-water due to their strong adsorptive characteristics demonstrated in laboratory and field studies. However, glyphosate does have the potential to contaminate surface waters due to its aquatic use patterns and erosion via transport of residues adsorbed to soil particles suspended in runoff water. If glyphosate were to reach surface water it would be resistant to hydrolysis and aqueous photolysis.  
**Persistence and degradability:** Glyphosate technical is readily degraded by soil microbes to aminomethyl phosphonic acid (AMPA), which is degraded to CO<sub>2</sub>, although at a slower rate than parent glyphosate.  
**Bioaccumulative Potential:** Not determined  
**Other adverse effects:** Not determined
