

Building Stronger Hardier Plants in Better Soils

Infused Soil Conditioning Granules

Trident's Pride infused soil conditioning granules are wholly organic and highly porous giving them excellent water and air holding properties. Tridents Pride soil conditioning granules not only increase the bulk density of potting mixes, but they allow for better aeration and drainage in the critical root area. They increase water retention and allow the root system a continuous supply of oxygen and allow the respired CO₂ a way to leave the root zone area.

DIRECTIONS FOR USE: Mix the Trident's Pride infused soil conditioning granules with your potting soil at a rate of about two cups per quart pot. Trident's Pride infused soil conditioning granules can also be added directly to the garden soil or new plantings to create an aerated base for vegetable gardens and new plantings of all kinds.

INGREDIENTS: Trident's Pride infused soil conditioning granules are #8 grade pure absorbive pumice stone infused with a 100% whole fish liquid soil enhancer. NPK 2-3-1

NOTE: Any residual liquid in the container is liquid soil enhancer. The residual liquid can be rinsed out and poured directly onto the soil.
